STROBE Statement—checklist of items that should be included in reports of observational studies

Section/item	Item No	Recommendation	Reported on Page Number/Line Number	Reported on Section/Paragraph
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	Page #1/ Line #2	Original Article
		(b) Provide in the abstract an informative and balanced summary of what was done and what was found	3-4/ 3-23	Abstract
Introduction				
Background/ rationale	2	Explain the scientific background and rationale for the investigation being reported	4/ 24-32	Introduction
Objectives	3	State specific objectives, including any prespecified hypotheses	4/ 32-36	Introduction
Methods				
Study design	4	Present key elements of study design early in the paper	5/ 41-42	Materials and methods-
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	5/ 39-41	materials and methods-setting
Participants	6	(a) ***Cohort study***—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up ***Case-control study***—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls ***Cross-sectional study***—Give the eligibility criteria, and the sources and methods of selection of participants	5/ 41-42	materials and methods-participants
		(b) ***Cohort study***—For matched studies, give matching criteria and number of exposed and unexposed ***Case-control study***—For matched studies, give matching criteria and the number of controls per case	5/ 42-43	materials and methods-participants
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	5/ 45-50	materials and methods-variables
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	51-91	materials and methods-Technique
Bias	9	Describe any efforts to address potential sources of bias	N/A	Data was taken
Study size	10	Explain how the study size was arrived at	5/ 39-42	materials and methods-
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	N/A	This study is qualitative describing the findings instead

Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	N/A	data was taken
		(b) Describe any methods used to examine subgroups and interactions	N/A	this article is an initial
		(c) Explain how missing data were addressed	N/A	this article is an initial
		(d) ***Cohort study***—If applicable, explain how loss to follow-up was addressed ***Case-control study***—If applicable, explain how matching of cases and controls was addressed ***Cross-sectional study***—If applicable, describe analytical methods taking account of sampling strategy	N/A	this article is an initial experience non-comperative study
		(e) Describe any sensitivity analyses	N/A	this article is an initial
Results				
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	7-8/ 91	Materials and methods-Pre-opreative diagnosis
		(b) Give reasons for non-participation at each stage	N/A	Patients were investigated
		(c) Consider use of a flow diagram	N/A	patients were taken
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	7-8/ 92	Demographics of the patients
		(b) Indicate number of participants with missing data for each variable of interest	N/A	There was no missing data
		(c) ***Cohort study***—Summarise follow-up time (eg, average and total amount)	N/A	Our article is not cohort
Outcome data	15*	***Cohort study***—Report numbers of outcome events or summary measures over time	N/A	This is an initial
		Case-control study—Report numbers in each exposure category, or summary measures of exposure	N/A	This is an initial
		Cross-sectional study—Report numbers of outcome events or summary measures	9/ 99-103	Results
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included	9-10/ 104-111	Results
		(b) Report category boundaries when continuous variables were categorized	N/A	No category boundaries in
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	N/A	No absolute or relative
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	N/A	This is an initial
Discussion				
Key results	18	Summarise key results with reference to study objectives	12-13/ 168-173	Conclusion
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias	13/ 173-175	Conclusion

Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence	10-12/ 113-162	Discussion
Generalisability	21	Discuss the generalisability (external validity) of the study results	N/A	This is only an initial
Other information				
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	13/ 188-190	Conflict of interest

*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.

Article information: https://dx.doi.org/10.21037/tp-22-216.
*As the checklist was provided upon initial submission, the page number/line number reported may be changed due to copyediting and may not be referable in the published version. In this case, the section/paragraph may be used as an alternative reference.
