The ARRIVE guidelines 2.0: author checklist

The ARRIVE Essential 10

These items are the basic minimum to include in a manuscript. Without this information, readers and reviewers cannot assess the reliability of the findings.

Item		Recommendation	Section/line number, or reason for not reporting
Study design	1	For each experiment, provide brief details of study design including: a. The groups being compared, including control groups. If no control group has been used, the rationale should be stated. b. The experimental unit (e.g. a single animal, litter, or cage of animals).	page 4-5/line 129-140; page 9/line 261-274; Page 7/Line 200-208 page 4-5/line 129-140
Sample size	2	a. Specify the exact number of experimental units allocated to each group, and the total number in each experiment. Also indicate the total number of animals used. b. Explain how the sample size was decided. Provide details of any *a priori* sample size calculation, if done.	page 5/line 137 page 10/line 289-290 page 9/line 297-299
Inclusion and exclusion criteria	3	a. Describe any criteria used for including and excluding animals (or experimental units) during the experiment, and data points during the analysis. Specify if these criteria were established *a priori.* If no criteria were set, state this explicitly. b. For each experimental group, report any animals, experimental units or data points not included in the analysis and explain why. If there were no exclusions, state so. c. For each analysis, report the exact value of *n* in each experimental group.	page 9/line 262-274 page 8/line 233 page 10/line 302-302 page 12/line 353-354 page 4-5/line 129-140; page 9/line 261-274
Randomisation	4	a. State whether randomisation was used to allocate experimental units to control and treatment groups. If done, provide the method used to generate the randomisation sequence. b. Describe the strategy used to minimise potential confounders such as the order of treatments and measurements, or animal/cage location. If confounders were not controlled, state this explicitly.	page 6/line 192 page 4/line 130-131
Blinding	5	Describe who was aware of the group allocation at the different stages of the experiment (during the allocation, the conduct of the experiment, the outcome assessment, and the data analysis).	page 8/line 214-241;248
Outcome measures	6	a. Clearly define all outcome measures assessed (e.g. cell death, molecular markers, or behavioural changes). b. For hypothesis-testing studies, specify the primary outcome measure, i.e. the outcome measure that was used to determine the sample size.	page 6/line 163-178; page 7-8/line 211-216;line 219-230 page8/line 233-242;line 244-249 page 8-9/line 252-269;line 277-278 page 6/line 163-178; page 7-8/line 211-216;line 219-230 page8/line 233-242;line 244-249 page 8-9/line 252-269;line 277-278
Statistical methods	7	a. Provide details of the statistical methods used for each analysis, including software used. b. Describe any methods used to assess whether the data met the assumptions of the statistical approach, and what was done if the assumptions were not met.	page 9-10/line 281-284 page 9-10/line 281-284
Experimental animals	8	a. Provide species-appropriate details of the animals used, including species, strain and substrain, sex, age or developmental stage, and, if relevant, weight. b. Provide further relevant information on the provenance of animals, health/immune status, genetic modification status, genotype, and any previous procedures.	page 4/line 130-131 page 5/line 143-144 page 6-7/line 189-190 page 4/line 130-131 page 5/line 143-144 page 6-7/line 189-190
Experimental procedures	9	For each experimental group, including controls, describe the procedures in enough detail to allow others to replicate them, including: a. What was done, how it was done and what was used. b. When and how often. c. Where (including detail of any acclimatisation periods). d. Why (provide rationale for procedures).	page 4-5/line 130-140;line 143-155 page 6-7/line 189-197 page 4-5/line 130-140;line 143-155 page 6-7/line 189-197 page 4-5/line 130-140;line 143-155 page 6-7/line 189-197 page 4-5/line 130-140;line 143-155 page 6-7/line 189-197
Results	10	For each experiment conducted, including independent replications, report: a. Summary/descriptive statistics for each experimental group, with a measure of variability where applicable (e.g. mean and SD, or median and range). b. If applicable, the effect size with a confidence interval.	page 10/line 288-295 page 11/line 319-329; line 340-341 page 12/line 344-345 page 12/line 359-361 page 10/line 288-295 page 11/line 319-329; line 340-341 page 12/line 344-345 page 12/line 359-361

The Recommended Set

These items complement the Essential 10 and add important context to the study. Reporting the items in both sets represents best practice.

Item		Recommendation	Section/line number, or reason for not reporting
Abstract	11	Provide an accurate summary of the research objectives, animal species, strain and sex, key methods, principal findings, and study conclusions.	page 10/line297-298; page 11/line329-330; pag
Background	12	a. Include sufficient scientific background to understand the rationale and context for the study, and explain the experimental approach. b. Explain how the animal species and model used address the scientific objectives and, where appropriate, the relevance to human biology.	page 4/line 104-126 page 4/line 104-126
Objectives	13	Clearly describe the research question, research objectives and, where appropriate, specific hypotheses being tested.	page 4/line 104-126
Ethical statement	14	Provide the name of the ethical review committee or equivalent that has approved the use of animals in this study, and any relevant licence or protocol numbers (if applicable). If ethical approval was not sought or granted, provide a justification.	page 15/line 443-446
Housing and husbandry	15	Provide details of housing and husbandry conditions, including any environmental enrichment.	page 4/line 130-131
Animal care and monitoring	16	a. Describe any interventions or steps taken in the experimental protocols to reduce pain, suffering and distress. b. Report any expected or unexpected adverse events. c. Describe the humane endpoints established for the study, the signs that were monitored and the frequency of monitoring. If the study did not have humane endpoints, state this.	page 4/line 132 page 6/line 190 page 10/line 307-308 page 11/line 329-330; 345-346 page 12/line 364-365 The study did not have humane endpoints
Interpretation/ scientific implications	17	a. Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature. b. Comment on the study limitations including potential sources of bias, limitations of the animal model, and imprecision associated with the results.	page 12/line 364-368 page 14/line 419-423
Generalisability/ translation	18	Comment on whether, and how, the findings of this study are likely to generalise to other species or experimental conditions, including any relevance to human biology (where appropriate).	page 14/line 409-417
Protocol registration	19	Provide a statement indicating whether a protocol (including the research question, key design features, and analysis plan) was prepared before the study, and if and where this protocol was registered.	n/a
Data access	20	Provide a statement describing if and where study data are available.	page 15/line 453
Declaration of interests	21	a. Declare any potential conflicts of interest, including financial and non-financial. If none exist, this should be stated. b. List all funding sources (including grant identifier) and the role of the funder(s) in the design, analysis and reporting of the study.	page 15/line 450 page 15/line 437-440
