STROBE Statement—checklist of items that should be included in reports of observational studies

Section/item	Item No	Recommendation	Reported on Page Number/Line Number	Reported on Section/Paragraph
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	1/1-3	Title page
		(b) Provide in the abstract an informative and balanced summary of what was done and what was found	2-3/20-52	Abstract
Introduction				
Background/ rationale	2	Explain the scientific background and rationale for the investigation being reported	4-6/57-102	Introduction/1-3
Objectives	3	State specific objectives, including any prespecified hypotheses	5-6/99-102	Introduction/3
Methods				
Study design	4	Present key elements of study design early in the paper	6/108-117	Methods/Patients and
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	6-7/108-135	Methods/Patients and study design/1-2
Participants	6	(a) ***Cohort study***—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up ***Case-control study***—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls ***Cross-sectional study***—Give the eligibility criteria, and the sources and methods of selection of participants	6-7/108-135	Methods/Patients and study design/1-2
		(b) ***Cohort study***—For matched studies, give matching criteria and number of exposed and unexposed ***Case-control study***—For matched studies, give matching criteria and the number of controls per case	NA	Study design does not include matched studies.
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	6-7/108-135	Methods/Patients and study design/1-2
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	7-8/137-165	Methods/Data collection/1 and Methods/Biomarker
Bias	9	Describe any efforts to address potential sources of bias	6/108-117	Methods/Patients and
Study size	10	Explain how the study size was arrived at	10/192	Results/Levels of
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	6/107-117	Methods/Patients and study design/1

Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	9/167-220	Methods/Statistical
		(b) Describe any methods used to examine subgroups and interactions	6-7/108-135	Methods/Patients and
		(c) Explain how missing data were addressed	NA	No missing data in this
		(d) ***Cohort study***—If applicable, explain how loss to follow-up was addressed ***Case-control study***—If applicable, explain how matching of cases and controls was addressed ***Cross-sectional study***—If applicable, describe analytical methods taking account of sampling strategy	7-8/138-149	Methods/Data collection/1
		(e) Describe any sensitivity analyses	9/167-220	Methods/Statistical
Results				
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	10/192	Results/Levels of endothelial injury and
		(b) Give reasons for non-participation at each stage	10/192	Results/Levels of
		(c) Consider use of a flow diagram	10/192	Results/Levels of
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	10/192-204	Results/Levels of endothelial injury and
		(b) Indicate number of participants with missing data for each variable of interest	NA	There were no missing
		(c) ***Cohort study***—Summarise follow-up time (eg, average and total amount)		
Outcome data	15*	***Cohort study***—Report numbers of outcome events or summary measures over time		
		Case-control study—Report numbers in each exposure category, or summary measures of exposure		
		Cross-sectional study—Report numbers of outcome events or summary measures	10/192-204	Results/Levels of
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included	10-13/192-262	Throughout results section
		(b) Report category boundaries when continuous variables were categorized	10-13/192-262	Throughout results section
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	NA	This method was not used
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	10-13/192-262	Throughout results section
Discussion				
Key results	18	Summarise key results with reference to study objectives	13/265-271	Discussion/1
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias	16-17/344-350	Discussion/7

Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence	13-16/265-342	Discussion/2-6
Generalisability	21	Discuss the generalisability (external validity) of the study results	16-17/335-342	Discussion/6
Other information				
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	18/367-368	Acknowledgements/1

*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
