The ARRIVE guidelines 2.0: author checklist

The ARRIVE Essential 10

These items are the basic minimum to include in a manuscript. Without this information, readers and reviewers cannot assess the reliability of the findings.

Item		Recommendation	Section/line number, or reason for not reporting
Study design	1	For each experiment, provide brief details of study design including: a. The groups being compared, including control groups. If no control group has been used, the rationale should be stated. b. The experimental unit (e.g. a single animal, litter, or cage of animals).	Page 6/Line 168-169. Page 7/Line 185-187. Page 6/Line 166.
Sample size	2	a. Specify the exact number of experimental units allocated to each group, and the total number in each experiment. Also indicate the total number of animals used. b. Explain how the sample size was decided. Provide details of any *a priori* sample size calculation, if done.	Page 6/Line 167-169. reference 29,30 and et. al. Line 168.
Inclusion and exclusion criteria	3	a. Describe any criteria used for including and excluding animals (or experimental units) during the experiment, and data points during the analysis. Specify if these criteria were established *a priori.* If no criteria were set, state this explicitly. b. For each experimental group, report any animals, experimental units or data points not included in the analysis and explain why. If there were no exclusions, state so. c. For each analysis, report the exact value of *n* in each experimental group.	The normal animal will be excluded if the MR images of kidney show abnormal signal, which mean there are some lesion in kidney. In this study, no animal was excluded. No animal and data point was excluded. Page 6/Line 169-170.
Randomisation	4	a. State whether randomisation was used to allocate experimental units to control and treatment groups. If done, provide the method used to generate the randomisation sequence. b. Describe the strategy used to minimise potential confounders such as the order of treatments and measurements, or animal/cage location. If confounders were not controlled, state this explicitly.	Page 6/Line 167-168. Page 6/Line 172, line 178. The heating pad was used to kept the body temperature of rats. Syringe pump to induced the otherness
Blinding	5	Describe who was aware of the group allocation at the different stages of the experiment (during the allocation, the conduct of the experiment, the outcome assessment, and the data analysis).	Quan Tao divided the rats into two groups randomly, and injected the agent for imaging. Peiwei Yi processed these data blind. And then, these data were statistically analyzed by Quan Tao without foreknowledge.
Outcome measures	6	a. Clearly define all outcome measures assessed (e.g. cell death, molecular markers, or behavioural changes). b. For hypothesis-testing studies, specify the primary outcome measure, i.e. the outcome measure that was used to determine the sample size.	Page 7/Line 193-233. both 5 for pH measurement of two agents.
Statistical methods	7	a. Provide details of the statistical methods used for each analysis, including software used. b. Describe any methods used to assess whether the data met the assumptions of the statistical approach, and what was done if the assumptions were not met.	Page 9/Line 234-239. Page 9/Line 236-238
Experimental animals	8	a. Provide species-appropriate details of the animals used, including species, strain and substrain, sex, age or developmental stage, and, if relevant, weight. b. Provide further relevant information on the provenance of animals, health/immune status, genetic modification status, genotype, and any previous procedures.	Page 6/Line 160. Page 6/Line 160. SPF male SD rats.
Experimental procedures	9	For each experimental group, including controls, describe the procedures in enough detail to allow others to replicate them, including: a. What was done, how it was done and what was used. b. When and how often. c. Where (including detail of any acclimatisation periods). d. Why (provide rationale for procedures).	Page 6/Line 166-180. Once, not a repeat and longitudinal experiment. Central Laboratory, Southern Medical University. Page 3/Line 67-80. Page 7/Data analysis.
Results	10	For each experiment conducted, including independent replications, report: a. Summary/descriptive statistics for each experimental group, with a measure of variability where applicable (e.g. mean and SD, or median and range). b. If applicable, the effect size with a confidence interval.	Page 13/Line 364，367. Page 9/Line 238.

The Recommended Set

These items complement the Essential 10 and add important context to the study. Reporting the items in both sets represents best practice.

Item		Recommendation	Section/line number, or reason for not reporting
Abstract	11	Provide an accurate summary of the research objectives, animal species, strain and sex, key methods, principal findings, and study conclusions.	Page 2/Line 34-36, Line 41-42, Line 43-49, Lin
Background	12	a. Include sufficient scientific background to understand the rationale and context for the study, and explain the experimental approach. b. Explain how the animal species and model used address the scientific objectives and, where appropriate, the relevance to human biology.	Page 3/Line 64-104. Page 3/Line 55-63.
Objectives	13	Clearly describe the research question, research objectives and, where appropriate, specific hypotheses being tested.	Page 4/Line 105-109.
Ethical statement	14	Provide the name of the ethical review committee or equivalent that has approved the use of animals in this study, and any relevant licence or protocol numbers (if applicable). If ethical approval was not sought or granted, provide a justification.	Page 6/Line 161-163，Page 17/Line 466-470.
Housing and husbandry	15	Provide details of housing and husbandry conditions, including any environmental enrichment.	Page 6/Line 164-166.
Animal care and monitoring	16	a. Describe any interventions or steps taken in the experimental protocols to reduce pain, suffering and distress. b. Report any expected or unexpected adverse events. c. Describe the humane endpoints established for the study, the signs that were monitored and the frequency of monitoring. If the study did not have humane endpoints, state this.	Page 7/Line 170. Page 7/Line 191-192. These animal were observed the daily activities and survival rate before euthanasia, and all rats lived normally after study. Page 7/L Line 192
Interpretation/ scientific implications	17	a. Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature. b. Comment on the study limitations including potential sources of bias, limitations of the animal model, and imprecision associated with the results.	Page 9/Line 248. Page 10/Line 279. Section RESULT and DISCUSSION. Page 15/Line 410-434.
Generalisability/ translation	18	Comment on whether, and how, the findings of this study are likely to generalise to other species or experimental conditions, including any relevance to human biology (where appropriate).	Page 14/Line 374-375. Page 14/Line 395-396.
Protocol registration	19	Provide a statement indicating whether a protocol (including the research question, key design features, and analysis plan) was prepared before the study, and if and where this protocol was registered.	Page 17/ FOOTNOTE/ Line478-479: The protocol was prepared before the study without registered.
Data access	20	Provide a statement describing if and where study data are available.	Page 17/ FOOTNOTE/ Line 477: The data are
Declaration of interests	21	a. Declare any potential conflicts of interest, including financial and non-financial. If none exist, this should be stated. b. List all funding sources (including grant identifier) and the role of the funder(s) in the design, analysis and reporting of the study.	Page 16/Line 464. All authors have completed the ICMJE uniform disclosure form. There is no conflicts of interest to declare. Page 16/Line 449-461. Acknowledgement.
