The REMARK checklist

Item to be reported		Reported on Page Number/Line Number	Reported on Section/Paragraph
INTRODUCTION			
1	State the marker examined, the study objectives, and any pre-specified hypotheses.	page 5, lines 2–	Introduction
MATERIALS AND METHODS			
Patients			
2	Describe the characteristics (e.g., disease stage or co-morbidities) of the study patients, including their source and inclusion and exclusion criteria.	page 8, lines 4–7; page 8, lines 10–13; page 22, lines	Materials and Methods/ Discussion/ References
3	Describe treatments received and how chosen (e.g., randomized or rule-based).	page 7, lines 10–	Materials and
Specimen characteristics			
4	Describe type of biological material used (including control samples) and methods of preservation and storage.	page 10, lines 2–4	Materials and Methods
Assay methods			
5	Specify the assay method used and provide (or reference) a detailed protocol, including specific reagents or kits used, quality control procedures, reproducibility assessments, quantitation methods, and scoring and reporting protocols. Specify whether and how assays were performed blinded to the study endpoint.	page 10, lines 15 to page 11, line 11; page 12, lines 9–14	Materials and Methods
Study design			
6	State the method of case selection, including whether prospective or retrospective and whether stratification or matching (e.g., by stage of disease or age) was used. Specify the time period from which cases were taken, the end of the follow-up period, and the median follow-up time.	page 7, lines 14–16; page 13, lines 1 to page 14, line 13	Materials and Methods
7	Precisely define all clinical endpoints examined.	page 8, lines 15-18	Materials and
8	List all candidate variables initially examined or considered for inclusion in models.	page 14, lines 15 to page	Materials and
9	Give rationale for sample size; if the study was designed to detect a specified effect size, give the target power and effect size.	page 9, lines 5–8	Materials and
Statistical analysis methods			
10	Specify all statistical methods, including details of any variable selection procedures and other model-building issues, how model assumptions were verified, and how missing data were handled.	page 13, lines 7–	Materials and
11	Clarify how marker values were handled in the analyses; if relevant, describe methods used for cutpoint determination.	page 12, line 9-14	Materials and

RESULTS			
Data			
12	Describe the flow of patients through the study, including the number of patients included in each stage of the analysis (a diagram may be helpful) and reasons for dropout. Specifically, both overall and for each subgroup extensively examined report the numbers of patients and the number of events.	page 13, lines 17 to page 14, line	Materials and Methods/ supplementary Figure Legends
13	Report distributions of basic demographic characteristics (at least age and sex), standard (disease-specific) prognostic variables, and tumor marker, including numbers of missing values.	page 7, line 14;	Materials and Methods/ Results
Analysis and presentation			
14	Show the relation of the marker to standard prognostic variables.	page 16, line 5 to page 18,	Results
15	Present univariable analyses showing the relation between the marker and outcome, with the estimated effect (e.g., hazard ratio and survival probability). Preferably provide similar analyses for all other variables being analyzed. For the effect of a tumor marker on a time-to-event outcome, a Kaplan-Meier plot is recommended.	page 15, line 13 to page 16, line 2; page 33, line 16 to page 34, line 2	Results/Supplementary Figure legend
16	For key multivariable analyses, report estimated effects (e.g., hazard ratio) with confidence intervals for the marker and, at least for the final model, all other variables in the model.	page 17, lines 17	Results
17	Among reported results, provide estimated effects with confidence intervals from an analysis in which the marker and standard prognostic variables are included, regardless of their statistical significance.	page 17, lines 17	Results
18	If done, report results of further investigations, such as checking assumptions, sensitivity analyses, and internal validation.	we did not perform such	Results
DISCUSSION			
19	Interpret the results in the context of the pre-specified hypotheses and other relevant studies; include a discussion of limitations of the study.	page 23, line 3-18	Discussion
20	Discuss implications for future research and clinical value.	page 24, lines 2–5	Discussion
