The REMARK checklist

Item to be reported		Reported on Page Number/Line Number	Reported on Section/Paragraph
INTRODUCTION			
1	State the marker examined, the study objectives, and any pre-specified hypotheses.	Page 7/line 150-165	Introduction/Paragraph 3
MATERIALS AND METHODS			
Patients			
2	Describe the characteristics (e.g., disease stage or co-morbidities) of the study patients, including their source and inclusion and exclusion criteria.	Page 7/line 169-Page 8/line 181	Patients and Methods/Paragraph 1
3	Describe treatments received and how chosen (e.g., randomized or rule-based).	Page 8/line 183-189	Patients and
Specimen characteristics			
4	Describe type of biological material used (including control samples) and methods of preservation and storage.	Page 8/line 199-206	Patients and
Assay methods			
5	Specify the assay method used and provide (or reference) a detailed protocol, including specific reagents or kits used, quality control procedures, reproducibility assessments, quantitation methods, and scoring and reporting protocols. Specify whether and how assays were performed blinded to the study endpoint.	Page 9/line208-Page 10/line 243	Patients and Methods/Paragraph 5-7
Study design			
6	State the method of case selection, including whether prospective or retrospective and whether stratification or matching (e.g., by stage of disease or age) was used. Specify the time period from which cases were taken, the end of the follow-up period, and the median follow-up time.	page 8/line 191-193	Patients and Methods/Paragraph 3
7	Precisely define all clinical endpoints examined.	page 8/ line 190-197	Patients and
8	List all candidate variables initially examined or considered for inclusion in models.	page 13/line 326-328	results/paragraph 6
9	Give rationale for sample size; if the study was designed to detect a specified effect size, give the target power and effect size.	page 8/line 183-189	Patients and
Statistical analysis methods			
10	Specify all statistical methods, including details of any variable selection procedures and other model-building issues, how model assumptions were verified, and how missing data were handled.	page 10/line 245-259	Statistical analysis/ paragraph 1
11	Clarify how marker values were handled in the analyses; if relevant, describe methods used for cutpoint determination.	page10/line 248-250	Statistical analysis/

RESULTS			
Data			
12	Describe the flow of patients through the study, including the number of patients included in each stage of the analysis (a diagram may be helpful) and reasons for dropout. Specifically, both overall and for each subgroup extensively examined report the numbers of patients and the number of events.	page 22/line 591-598	Figure 2.
13	Report distributions of basic demographic characteristics (at least age and sex), standard (disease-specific) prognostic variables, and tumor marker, including numbers of missing values.	page 10/line 262-page 11/line 275	results/paragraph 1
Analysis and presentation			
14	Show the relation of the marker to standard prognostic variables.	page 11/line 287-296	results/paragraph 3
15	Present univariable analyses showing the relation between the marker and outcome, with the estimated effect (e.g., hazard ratio and survival probability). Preferably provide similar analyses for all other variables being analyzed. For the effect of a tumor marker on a time-to-event outcome, a Kaplan-Meier plot is recommended.	page 12/line 300-309	results/paragraph 4
16	For key multivariable analyses, report estimated effects (e.g., hazard ratio) with confidence intervals for the marker and, at least for the final model, all other variables in the model.	page 12/line 310-page 13/line 322	results/paragraph 5
17	Among reported results, provide estimated effects with confidence intervals from an analysis in which the marker and standard prognostic variables are included, regardless of their statistical significance.	page 22	Figure 2
18	If done, report results of further investigations, such as checking assumptions, sensitivity analyses, and internal validation.	page13/line 324-331	results/paragraph 6
DISCUSSION			
19	Interpret the results in the context of the pre-specified hypotheses and other relevant studies; include a discussion of limitations of the study.	page 13/line 333-page	discussion/paragraph 1;
20	Discuss implications for future research and clinical value.	page 15/line 395-399	discussion/paragraph 3
