

## Data Sharing Statement

<b>Article Info</b>	<a href="http://dx.doi.org/10.21037/apm-20-1362">http://dx.doi.org/10.21037/apm-20-1362</a>	
<b>Item</b>	<b>Question</b>	<b>Authors' Response (place "-" if not applicable)</b>
1	Would you like to share data collected for your study to others?	Yes.
2	If not, would you like to share the reason for your decision?	-
3	What data in particular will be shared?	The ventricular fibrillation patients had significantly higher activity of creatine kinase myocardial band (CK-MB) isoenzyme than the acute myocardial infarction patients; the heart rate variability (HRV) time-domain indices(SDNN, SDANN, rMSSD, and PNN50%) in acute myocardial infarction patients were significantly higher the ventricular fibrillation patients, which has seldom been provided in previous studies
4	Any other documents will be shared? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	Yes. Statistical analysis plan, informed consent form, and clinical study report will also be shared if requested.
5	When will data availability begin?	From the publication date.
6	When will data availability end?	Three years within the publication date, since the technique or survival date may be updated over time.
7	To whom will you share the data?	Medical oncologists and breast surgeons who are interested in studies of dynamic electrocardiogram in predicting ventricular fibrillation in elderly acute myocardial infarction patients.
8	For what type of analysis or purpose?	For analysis to evaluate the safety of dynamic electrocardiogram in predicting ventricular fibrillation in elderly acute myocardial infarction patients.
9	How or where can the data/documents be obtained?	Emails could be sent to the address below to obtain the shared data: wj18663506828@126.com

10	Any other restrictions?	We may balance the potential benefits and risks for each request and then provide the data that could be shared.
