Review Comments:

The authors performed an interesting in silico analysis of available database to explore the association between microbiome and metabolomics signatures and Biliary Tract Cancer.

I don't have major comments but would suggest to avoid the long list of metabolites with the Odds Ratio, focus on the most significant ones (p value is not reported) and add a supplementary Table maybe.

Comment 1: suggest to avoid the long list of metabolites with the Odds Ratio, focus on the most significant ones (p value is not reported) and add a supplementary Table maybe.

Reply 1: Thank you for your kind suggestions. We have added the p value and displayed it in bold in supplementary table S2 and S3.

Changes in the text: Supplementary table S2 and S3.
