Reviewer A

Guidelines for ATM priority areas have been described. The article is well written. The only thing worth paying attention to is the correctness of the statistical analyzes conducted at ATM. Models T0 to T4 without implementation of appropriate statistical recommendations may not be of practical significance.

Reply: Thank you for your comment. The mentioned statistical recommendation is great. However, the issue is beyond the aim of this manuscript. We highly welcome more specific suggestions on the correctness of the statistical analyzes conducted at ATM and we would consider take actions to specifically address the issue.

Revision: none.
