Retraction to: *Ann Transl Med* 2022;10:11.

The paper “CircRASSF2 promotes IGF1R and osteosarcoma metastasis via sponging miR-6838-5p” (doi: 10.21037/atm-21-6123) published in *Annals of Translational Medicine* in Vol 10, No 1 (January 15, 2022) (1) has been retracted at the request of the authors. We have carefully checked the original data and found some deficiency should be replenished including animal experiments and chromatin immunoprecipitation to further validate the mechanism of the circRASSF2/miR-6838-5p/IGF1R axis. These shortcomings may influence the reliability and integrity of results in current study. Hence, based on our responsible attitude towards the editorial board and readers, we have decided to retract this article after discussion. All authors agree with the retraction of the paper. We are sorry for the inconvenience caused.

Footnote

Conflicts of Interest: All authors have completed the ICMJE uniform disclosure form (available at <https://atm.amegroups.com/article/view/10.21037/atm-2024-02/coif>). The authors have no conflicts of interest to declare.

Ethical Statement: The authors are accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.
