Retraction to: *Ann Transl Med* 2022;10:1350.

The paper “Aerobic exercise reverses the NF- κ B/NLRP3 inflammasome/5-HT pathway by upregulating irisin to alleviate post-stroke depression” (doi: 10.21037/atm-22-5443) published in *Annals of Translational Medicine* in Vol 10, No 24 (December 31, 2022) (1) has been retracted at the request of the authors. Recently readers have pointed out that there are overlap figures between our paper and another article titled “Long noncoding RNA HOXC-AS3 interacts with CDK2 to promote proliferation in hepatocellular carcinoma” (2) published by unrelated authorship. We have immediately investigated the manuscript and confirmed that there are errors with the figures. Therefore, we no longer have confidence in the conclusions in the manuscript and decided to retract this article. All authors agree with the retraction of the paper. We are sorry for the inconvenience caused.

Footnote

Conflicts of Interest: All authors have completed the ICMJE uniform disclosure form (available at <https://atm.amegroups.com/article/view/10.21037/atm-2024-29/coif>). The authors have no conflicts of interest to declare.

Ethical Statement: The authors are accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.
