

Data Sharing Statement

Article Info	https://dx.doi.org/10.21037/atm-21-5854	
Item	Question	Authors' Response (place "-" if not applicable)
1	Would you like to share data collected for your study to others?	Yes.
2	If not, would you like to share the reason for your decision?	-
3	What data in particular will be shared?	Including the circRNA data set (GSE101684) in the GEO database, the miRNA data set (GSE135918), and the clinical information and gene expression profiles of lung adenocarcinoma patients in the TCGA database. Clinical data include age, gender, T stage, N stage, survival time, and survival status. Our team can provide all the above raw data.
4	Any other documents will be shared? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	Statistical analysis plan, informed consent form, and analytic code will also be shared if requested.
5	When will data availability begin?	From the publication date.
6	When will data availability end?	Within two years of the publication date, since bioinformatics analysis will continue to make breakthroughs, data such as survival time in the database will continue to expand over time.
7	To whom will you share the data?	Medical oncologists and thoracic surgeons interested in the research of ceRNA regulatory networks.
8	For what type of analysis or purpose?	It is used to explore the specific regulatory mechanism of hsa_circ_0031968, miR-3611, GCG, or hsa_circ_0031968/miR-3611/GCG axis in the occurrence and development of lung adenocarcinoma.

9	How or where can the data/documents be obtained?	My email: zhangyuan9409@163.com
10	Any other restrictions?	We may need to balance the potential benefits and risks of each request, fully respect each team member's research results and opinions, and then provide data that can be shared.
