

Data Sharing Statement

Article Info	https://dx.doi.org/10.21037/mhealth-23-18	
Item	Question	Authors' Response (place "-" if not applicable)
1	Would you like to share data collected for your study to others?	We are not currently in a position where we believe sharing of the raw data is permitted.
2	If not, would you like to share the reason for your decision?	Our paper concerns data rights, and the re-use, mis-use or use without knowledge of participants health data. To share data we collected solely for the purpose of this study, without the express written consent of all participants, we believe would be a mistake and a contradiction of our study findings. Had we consented to multiple future uses of the data we collected we would have had no problem in sharing any and all data. However, without gaining consent, we do not feel comfortable in sharing the raw data collected from those taking part in both our focus group and survey.
3	What data in particular will be shared?	None
4	Any other documents will be shared? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	We have provided the advertisement for the study and the study survey instrument. The statistical plan was minimal for this study, given the limited nature of the data. We have also shared the topic guide for the focus group.
5	When will data availability begin?	N/A
6	When will data availability end?	N/A
7	To whom will you share the data?	N/A
8	For what type of analysis or purpose?	N/A

9	How or where can the data/ documents be obtained?	N/A
10	Any other restrictions?	No
