Section/item	ltem No	Recommendation	Reported on Page Number/Line Number	Reported on Section/Paragraph
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	Page1/line4	Original Article
		(b) Provide in the abstract an informative and balanced summary of what was done and what was found	Page1/line28-30	Background
Introduction				
Background/ rationale	2	Explain the scientific background and rationale for the investigation being reported	Page1/line28-32	Background
Objectives	3	State specific objectives, including any prespecified hypotheses	Page1/line30-32	Background
Methods				
Study design	4	Present key elements of study design early in the paper	Page2/line59-67	Introduction
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	Page2/line60-105	Introduction
Participants	6	<ul> <li>(a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up</li> <li>Case-control study—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls</li> <li>Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of participants</li> </ul>	Page3/line109	Study design
		(b) <b>Cohort study</b> —For matched studies, give matching criteria and number of exposed and unexposed <b>Case-control study</b> —For matched studies, give matching criteria and the number of controls per case	Page3/line1011	Study design
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	Page3/line114-119	Study design
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	Pag4/line154	Observation indicators
Bias	9	Describe any efforts to address potential sources of bias	NA	NA
Study size	10	Explain how the study size was arrived at	NA	NA
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	Page4/line190-195	Statistical methods

## STROBE Statement—checklist of items that should be included in reports of observational studies

12	(a) Describe all statistical methods, including those used to control for confounding	Page4/line190-195	Statistical methods
	(b) Describe any methods used to examine subgroups and interactions	NA	NA
	(c) Explain how missing data were addressed	NA	NA
	(d) <b>Cohort study</b> —If applicable, explain how loss to follow-up was addressed <b>Case-control study</b> —If applicable, explain how matching of cases and controls was addressed <b>Cross-sectional study</b> —If applicable, describe analytical methods taking account of sampling strategy	Page4/line190-195	Statistical methods
	(e) Describe any sensitivity analyses	NA	NA
13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	Pagea3/line102-107	Introduction
	(b) Give reasons for non-participation at each stage	NA	NA
	(c) Consider use of a flow diagram	NA	NA
14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	Page5/line199-201	Results
	(b) Indicate number of participants with missing data for each variable of interest	NA	NA
	(c) <b>Cohort study</b> —Summarise follow-up time (eg, average and total amount)	Page5/Line203-221	Results
15*	Cohort study—Report numbers of outcome events or summary measures over time	Page5/Line209-221	Results
	Case-control study—Report numbers in each exposure category, or summary measures of exposure	NA	NA
	Cross-sectional study—Report numbers of outcome events or summary measures	NA	NA
16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included	Page5/line199-221	Results
	(b) Report category boundaries when continuous variables were categorized	Page5/line199-221	Results
	(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	NA	NA
17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	NA	NA
	·		
18	Summarise key results with reference to study objectives	Page5-6/line234-282	Discussion
19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias	Page6/line275-282	Discussion
	13* 14* 15* 16 17 18	13*       (a) Describe any methods used to examine subgroups and interactions         (b) Describe any methods used to examine subgroups and interactions         (c) Explain how missing data were addressed         (d) Cohort study—If applicable, explain how loss to follow-up was addressed         Case-control study—If applicable, explain how matching of cases and controls was addressed         Cross-sectional study—If applicable, describe analytical methods taking account of sampling strategy         (e) Describe any sensitivity analyses         13*       (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed         (b) Give reasons for non-participation at each stage       (c) Consider use of a flow diagram         14*       (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders         (b) Indicate number of participants with missing data for each variable of interest       (c) Cohort study—Summarise follow-up time (eg, average and total amount)         15*       Cohort study—Report numbers of outcome events or summary measures over time         Case-control study—Report numbers of outcome events or summary measures       (a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included         (b) Report category boundaries when c	(b) Describe any methods used to examine subgroups and interactions         NA           (c) Explain how missing data were addressed         NA           (d) Cohort study—If applicable, explain how loss to follow-up was addressed Case-control study—If applicable, explain how matching of cases and controls was addressed Cross-sectional study—If applicable, explain how matching of cases and controls was addressed         Page4/line190-195           13*         (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed         NA           13*         (a) Report numbers of individuals at each stage         NA           (b) Give reasons for non-participation at each stage         NA           (c) Consider use of a flow diagram         NA           14*         (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders         Page5/line199-201           15*         Cohort study—Report numbers of outcome events or summary measures over time         Page5/line203-221           15*         Cohort study—Report numbers of outcome events or summary measures         NA           16         (a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included         Page5/line199-221           (b) Report category boundaries when

Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence	Page6/line275-282	Discussion			
Generalisability	21	Discuss the generalisability (external validity) of the study results	Page6/line234-282	Discussion			
Other information							
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	Page6/line294-296	Acknowledgments			

\*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

**Note:** An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
