

## Data Sharing Statement

<b>Article Info</b>	<a href="https://dx.doi.org/10.21037/tp-23-76">https://dx.doi.org/10.21037/tp-23-76</a>	
<b>Item</b>	<b>Question</b>	<b>Authors' Response (place "-" if not applicable)</b>
1	Would you like to share data collected for your study to others?	No.
2	If not, would you like to share the reason for your decision?	First, the data concerns patient privacy, especially if these people are infants and young children. For this part of the special population data, the unit's control is particularly strict. Secondly, cranial suture premature closure will cause slight changes in the appearance of the patient, despite later treatment, but will still leave traces. Therefore, the information of these people needs to be kept confidential. Finally, in addition to environmental factors, genetic factors are also important factors affecting craniosynostosis. Therefore, the sharing of data also means an increased risk of privacy disclosure, which is likely to cause problems in the future of the patient (e.g., marriage, having children).
3	What data in particular will be shared?	-
4	Any other documents will be shared? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	-
5	When will data availability begin?	-
6	When will data availability end?	-
7	To whom will you share the data?	-
8	For what type of analysis or purpose?	-

9	How or where can the data/documents be obtained?	-
10	Any other restrictions?	-
