

Data Sharing Statement

Article Info	https://dx.doi.org/10.21037/apm-21-1174	
Item	Question	Authors' Response (place "-" if not applicable)
1	Would you like to share data collected for your study to others?	Yes.
2	If not, would you like to share the reason for your decision?	-
3	What data in particular will be shared?	The multivariable analysis data in particular will be shared, and we also found that plasma FXIII level may be an independent determinant for predicting post-thrombolytic bleeding risk in AIS patients, which has seldom been provided in previous studies.
4	Any other documents will be shared? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	Study protocol and statistical analysis plan will be shared if requested.
5	When will data availability begin?	From the publication date.
6	When will data availability end?	One year within the publication date, since the test technique or mechanism linking low FXIII with post-thrombolytic ICH may be updated over time.
7	To whom will you share the data?	Laboratory physicians in the Department of Laboratory Medicine and Doctors in the Department of Neurology who are interested in studies of stroke or coagulation.
8	For what type of analysis or purpose?	For analysis to evaluate the clinical value of FXIII in the prognosis and monitoring of stroke.
9	How or where can the data/documents be obtained?	Emails could be sent to the address below to obtain the shared data: 69676275@qq.com
10	Any other restrictions?	We may balance the potential benefits and risks for each request and then provide the data that could be shared.
