Section/item	ltem No	Recommendation	Reported on Page Number/Line Number	Reported on Section/Paragraph
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	p1,18	abstract-para2
		(b) Provide in the abstract an informative and balanced summary of what was done and what was found	p1-2, 18-33	abstract-para2-3
Introduction				
Background/ rationale	2	Explain the scientific background and rationale for the investigation being reported	p3, 44-67	Introduction-para1-2
Objectives	3	State specific objectives, including any prespecified hypotheses	p4, 68-71	Introduction-para3
Methods				
Study design	4	Present key elements of study design early in the paper	p2,35-40	Study design
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	p4, 77-79	Methods-para 1
Participants	6	 (a) Cohort study – Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up Case-control study – Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls Cross-sectional study – Give the eligibility criteria, and the sources and methods of selection of participants 	p4, 76-84	Methods-para 1
		(b) Cohort study —For matched studies, give matching criteria and number of exposed and unexposed Case-control study —For matched studies, give matching criteria and the number of controls per case	p4, 76-84	Methods-para 1
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	p4, 92-106	Methods-para 2-3
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	p5,147-179	Methods/measurement
Bias	9	Describe any efforts to address potential sources of bias	NA	NA
Study size	10	Explain how the study size was arrived at	NA	NA
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	NA	NA

STROBE Statement-checklist of items that should be included in reports of observational studies

12	(a) Describe all statistical methods, including those used to control for confounding	p7, 114-123	Methods-para 4
	(b) Describe any methods used to examine subgroups and interactions	p7, 114-123	Methods-para 4
	(c) Explain how missing data were addressed	NA	NA
	(d) Cohort study —If applicable, explain how loss to follow-up was addressed Case-control study —If applicable, explain how matching of cases and controls was addressed Cross-sectional study —If applicable, describe analytical methods taking account of sampling strategy	NA	NA
	(e) Describe any sensitivity analyses	NA	NA
13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	p8, 126-132	Results-para 1
	(b) Give reasons for non-participation at each stage	NA	NA
	(c) Consider use of a flow diagram	NA	NA
14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	p8, 126-132	Results-para 1
	(b) Indicate number of participants with missing data for each variable of interest	NA	NA
	(c) Cohort study —Summarise follow-up time (eg, average and total amount)	NA	NA
15*	Cohort study – Report numbers of outcome events or summary measures over time	NA	NA
	Case-control study – Report numbers in each exposure category, or summary measures of exposure	p 8-9, 134-156	Results-para 2-3
	Cross-sectional study – Report numbers of outcome events or summary measures	NA	NA
16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included	p 8-9, 134-156	Results-para 2-3
	(b) Report category boundaries when continuous variables were categorized	NA	NA
	(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	NA	NA
17	Report other analyses done-eg analyses of subgroups and interactions, and sensitivity analyses	NA	NA
18	Summarise key results with reference to study objectives	p12, 170-173	Discussion-para 2
19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction	p13, 202-208	Discussion-para 5
	13* 14* 15* 16 17 18	(b) Describe any methods used to examine subgroups and interactions (c) Explain how missing data were addressed (c) Explain how missing data were addressed (c) Cohort study—If applicable, explain how matching of cases and controls was addressed (c) Cohort study—If applicable, explain how matching of cases and controls was addressed (c) Cost of study—If applicable, explain how matching of cases and controls was addressed (c) Describe any sensitivity analyses (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed (b) Give reasons for non-participation at each stage (c) Consider use of a flow diagram 14* (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders (b) Indicate number of participants with missing data for each variable of interest (c) Cohort study—Report numbers of outcome events or summary measures over time Case-control study—Report numbers of outcome events or summary measures 16 (a) Give unadjusted estimates and, if applicable, confounder-adjusted for and why they were included (b) Report category boundaries when continuous variables were categorized (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	(a) Describe any methods used to examine subgroups and interactions p7, 114-123 (b) Describe any methods used to examine subgroups and interactions p7, 114-123 (c) Explain how missing data were addressed NA (c) Explain how missing data were addressed NA Case-control study—If applicable, explain how matching of cases and controls was addressed NA (c) Explain how missing data were addressed NA (d) Cohort study—If applicable, describe analytical methods taking account of sampling strategy NA (e) Describe any sensitivity analyses NA 13* (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed p8, 126-132 (b) Give reasons for non-participation at each stage NA (c) Consider use of a flow diagram NA 14* (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders p8, 126-132 (b) Indicate number of participants with missing data for each variable of interest NA (c) Cohort study—Report numbers of outcome events or summary measures of exposure p8-9, 134-156 Cross-sectional study—Report numbers of outcome events or summary measures of exposure p8-9, 134-156

Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence	p13, 189-201	Discussion-para 4				
Generalisability	21	Discuss the generalisability (external validity) of the study results	p13, 202-208	Discussion-para 5				
Other information								
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	p7, 230–232	Fundi ng				

*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
