author upon reasonable request.   What data in particular will be shared?   Any other documents will be shared? Such asstudy protocol, statistical analysis plan, informed consent form, clinical study report, analytic code. Statistical analysis plan and clinical study report will also be shared if requested.   When will data availability begin? From the publication date.   When will data availability end? From the publication date.   To whom will you share the data? Two years within the publication date, since the technique or survival date may be updated over time.   For what type of analysis or purpose? The results of our study seemingly attest that lipids, especially cholesterol, may play an important role in viral replication, internalization and immune activation in patients with SARS- CoV-2 infection. We also speculate that the lipic abnormalities observed during and after this infection could be used for assessing indirectly t response to clinical treatment.   How or where can the data/documents be obtained? Emails could be sent to the address below to obtain the shared data: (v.roccaforte@asst-lecco.it)	Data Sharing Statement			
(place "-" if not applicable)     1   Would you like to share data collected for your study to others?   Yes     2   If not, would you like to share the reason for your decision?   The datasets used and/or analyzed during the current study are available from the correspondinauthor upon reasonable request.     3   What data in particular will be shared?   The datasets used and/or analyzed during the current study are available from the correspondinauthor upon reasonable request.     4   Any other documents will be shared?   Statistical analysis plan and clinical study report will also be shared if requested.     5   when will data availability begin?   From the publication date.     6   When will data availability end?   Two years within the publication date, since the technique or survival date may be updated over time.     7   To whom will you share the data?   With professionals interested in studying     8   For what type of analysis or purpose?   The results of our study seemingly attest that lipids, especially cholesterol, may play an important role in viral replication, internalization and immune activation in patients with SARS-CoV-2 infection. We also speculate that the lipid ahormalities observed during and after this infection could be used for assessing indirectly t response to clinical treatment.     9   How or where can the data/documents be obtained?
