

STROBE Statement—checklist of items that should be included in reports of observational studies

	Item No.	Recommendation	Page No.	Line No.
Title and abstract	1	(a) Indicate the study’s design with a commonly used term in the title or the abstract	1	1-3
		(b) Provide in the abstract an informative and balanced summary of what was done and what was found	2-3	33-57
Introduction				
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported	4	62-76
Objectives	3	State specific objectives, including any prespecified hypotheses	4-5	77-92
Methods				
Study design	4	Present key elements of study design early in the paper	5	95
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	5-7	95-101
Participants	6	(a) <i>Cohort study</i> —Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up <i>Case-control study</i> —Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls <i>Cross-sectional study</i> —Give the eligibility criteria, and the sources and methods of selection of participants	5	96-102
		(b) <i>Cohort study</i> —For matched studies, give matching criteria and number of exposed and unexposed <i>Case-control study</i> —For matched studies, give matching criteria and the number of controls per case	10	201-208
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	5-6	95-113
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	5-7	103-144
Bias	9	Describe any efforts to address potential sources of bias	9	185
Study size	10	Explain how the study size was arrived at	10,	201

Continued on next page

Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	9-10	189-198
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	9-10	189-198
		(b) Describe any methods used to examine subgroups and interactions	NA, non-subgroups	
		(c) Explain how missing data were addressed	9	185
		(d) <i>Cohort study</i> —If applicable, explain how loss to follow-up was addressed <i>Case-control study</i> —If applicable, explain how matching of cases and controls was addressed <i>Cross-sectional study</i> —If applicable, describe analytical methods taking account of sampling strategy	6	112-122
		(e) Describe any sensitivity analyses	NA, non-sensitivity analyses	
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	10	201-208
		(b) Give reasons for non-participation at each stage	9	184-187
		(c) Consider use of a flow diagram	NA, non-flow diagram	
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	10-12	200-240
		(b) Indicate number of participants with missing data for each variable of interest	9	184-187
		(c) <i>Cohort study</i> —Summarise follow-up time (eg, average and total amount)	NA, non-cohort study	
Outcome data	15*	<i>Cohort study</i> —Report numbers of outcome events or summary measures over time	NA, non-cohort study	
		<i>Case-control study</i> —Report numbers in each exposure category, or summary measures of exposure	7-9	145-178
		<i>Cross-sectional study</i> —Report numbers of outcome events or summary measures	NA, non-Cross-sectional study	
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included	11 12	227-228 239-240

		(b) Report category boundaries when continuous variables were categorized	7	146
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	NA, non-absolute risk	
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	NA, non-subgroups	
Key results	18	Summarise key results with reference to study objectives	10-12	209-240
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias	14-15	297-313
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence	15	313-319
Generalisability	21	Discuss the generalisability (external validity) of the study results	15-16	319-322
Other information				
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	17	340-341

*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at <http://www.plosmedicine.org/>, Annals of Internal Medicine at <http://www.annals.org/>, and Epidemiology at <http://www.epidem.com/>). Information on the STROBE Initiative is available at www.strobe-statement.org. The authors have completed the observational studies reporting checklist.
