

Data Sharing Statement

Article Info	https://dx.doi.org/10.21037/jtd-23-795	
Item	Question	Authors' Response (place "-" if not applicable)
1	Would you like to share data collected for your study to others?	Yes. I think there are some security issues with sharing data. If researchers are interested in this data, they can ask for it by email, and I will share this data with those who need it, not everyone.
2	If not, would you like to share the reason for your decision?	-
3	What data in particular will be shared?	The bioinformatics analysis relies on data sourced from publicly available databases, which are accessible to interested researchers and do not require sharing. However, we are open to reasonably justified requests for the sharing of experimental data.
4	Any other documents will be shared? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	Yes, but I can share the literature by email according to the researchers' needs, rather than sharing it with everyone.
5	When will data availability begin?	I'm not sure. If his needs are reasonable, I can provide the data right away. But without the right requirements, I will not provide this data.
6	When will data availability end?	I'm not sure. If his needs are reasonable, I can provide the data right away. But without the right requirements, I will not provide this data.
7	To whom will you share the data?	People who conduct research related to ubiquitination.
8	For what type of analysis or purpose?	As long as it's good for their research.
9	How or where can the data/documents be obtained?	Email to the corresponding author
10	Any other restrictions?	No.
