Reviewer Comments

This article presents the report of a patient who developed chylothorax 38 months after treatment with dasatinib for chronic myeloid leukemia. The patient's condition did not improve with discontinuation of dasatinib or the use of diuretics, steroids, or octreotide, but improved with fasting.

The authors reviewed 13 previously reported cases of dasatinib-induced chylothorax and reported that chylothorax generally occurred 16.5 months after starting dasatinib, improved in 10 patients after dasatinib was discontinued, and flared up in 2 patients after dasatinib was restarted. The authors emphasized the use of fasting as a treatment method, in addition to drug discontinuation and the use of steroids and diuretics.

The contents of the article are reasonable and suitable for publication.

Please consider the following minor modifications.

Comment 1: Page 1, line 15: What does CNKI stand for?

Reply 1: CNKI is the abbreviation of China national knowledge infrastructure.

Changes in the text: We have added China National Knowledge Infrastructure (see Page 1, line 15)

Comment 2: Page 1, line 18: What does CAARE stand for?

Reply 2: Apart from following the general format for case reports, *Translational Cancer Research* requires that authors should prepare case reports according to the CARE guidelines, and our submission should include a report checklist (a reformatted version has been produced for the journal) as supplementary material.

Changes in the text: According to the requirements of *Translational Cancer Research*, we made a note in the article(see Page 1, line 18).

Comment 3: Page 6, line 103: Goreisa→Goreisan

Reply 3: we have modified our text as advised.

Changes in the text: Page 6, line 107

Comment 4: All references cited for the cases shown in the table should be listed in the reference list.

Reply 4: We have indicated that all references to the cases shown in the table should be listed in the reference list.

Changes in the text: See Table. 1 and Page 10, line 205-217.
