

Peer Review File

Article information: <https://dx.doi.org/10.21037/fomm-23-4>

Reviewer A

It might add to the quality and interest of the paper if you discussed how different mutations e.g., loss of function, gain of function correlate with the pathology seen and more clinical applications

Reply: Reviewer A suggested discussing how different mutations correlate with pathology. This was addressed in lines 234-235.

Reviewer B

The authors present a narrative review of orofacial clefts and craniosynostosis, including their Embryology, Genetics Evaluation, Genetic Testing, and Selected associated Syndromes. I missed the citation of the consulted references in two or three places. Correcting it, I believe that the article can be published in the way it was presented.

Reply: Reviewer B suggested adding citations in two different areas, and citations have been added.
