## Appendix 1: Comprehensive search plan based on population, intervention, comparator and outcomes (PICO) with sample search terms employed in Medline Ovid

### Details

This search is required for the following systematic review: Surgical and radiological interventions for treating symptomatic cervical artery dissection.

### Population

Participants with a clinical diagnosis of symptomatic extracranial carotid artery and/or vertebral artery dissections will be included if associated with active neurological symptoms.

### Intervention and Comparison

Radiological intervention plus medical therapy versus medical therapy alone

Surgical intervention plus medical therapy versus medical therapy alone

### Outcomes

Not required for search

### Limits/filters

Stated in protocol: “All search strategies deployed will be combined with subject strategy adaptations of the highly sensitive search strategy designed by the Cochrane Collaboration for identifying randomised controlled trials and controlled clinical trials (as described in the Cochrane Handbook for Systematic Reviews of Interventions Chapter 6, Lefebvre 2011).”

Please note that this is not possible for all search strategies.
