Figure S1 Screening for TKIs that induce the ferroptosis of lung cancer cells. (A-D) Killing effect of EGFR drugs (BIBW552, Mubritinib, VP-TAE684, and Pelitinib) at different concentrations of 0.5μM Fer-1 on A549 cells (24 h); (E,F) Killing effect of the non-EGFR drug (E0708, Erlotinib) at different concentrations at 0.5 μm Fer-1 on A549 cells (24 h). *, P<0.05; **, P<0.01.
