

Figure S1 Differences in pyroptosis-related genes and immune cells between high and low risk groups. (A) Differences in the expression of pyroptosis-related genes between high- and low-risk groups. (B) Comparison of immune cells between high- and low-risk groups calculated using the single-sample gene set enrichment analysis (ssGSEA) method based on The Cancer Genome Atlas (TCGA) database. *, $P < 0.05$; **, $P < 0.01$; ***, $P < 0.001$.
