

Supplementary

Figure S1 Western blotting analyses of TLR3, TSLP, and IL-13Rα1 levels. Calcipotriol (MC903) + polyinosinic:polycytidylic acid [poly (I:C)] treatment increased TLR3, TSLP, and IL-13Rα1 levels relative to MC903 + vehicle treatment.

Figure S2 Western blotting analyses of TLR3, TSLP, and IL-13Rα1 levels. Polyinosinic:polycytidylic acid [poly (I:C)] administration four consecutive days significantly increased levels of TSLP and IL-13Rα1 as compared to injection for 0-1 days.
