Model 1: full model including mPAP, CO and PH groups 1 (base case), 2 and 4 as covariables for the explanation of 50% core lung vessel volume. Model 2: inclusion of only CO and PH group as covariables. Model 3: inclusion of only mPAP and CO as covariables. Model 4: inclusion of only mPAP and PH group as covariables. Models 5–7: Univariate analyses of CO, PH group or mPAP for the explanation of 50% core lung vessel volume. Classification of patients to PH groups 1, 2 and 4 was based on the diagnosis in the patients' records. *, P value <0.05; ***, P value <0.001. PH, pulmonary hypertension; BSA, body surface area; mPAP, mean pulmonary arterial pressure; CO, cardiac output.
