The group ANOVA column lists the overall P value from the ANOVA for each metabolite and the subsequent columns are the P values from each of the inter-group comparisons computing using a Tukey post-hoc test. [†], entries are those with an uncorrected P value of <0.05. ANOVA, analysis of variance; HW_{med}, median HW; HW, high wasting; LW_{med}, median LW; LW, low wasting; LKD, living-related kidney donor; FC, fold change.
