

Figure S1 CONSORT diagram outlining patient selection for cT1N0M0 NSCLC and identification of SPLC. NSCLC, Non-small cell lung cancer; SPLC, Second primary lung cancer.

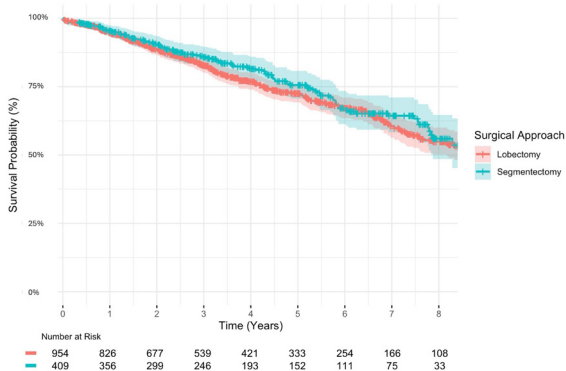

Figure S2 Kaplan-Meier overall survival curve for all patients who underwent resection for first primary lung cancer (FPLC), stratified by surgical approach. Shaded areas represent 95% confidence intervals. There was no significant difference in overall survival between the lobectomy (red) and segmentectomy (blue) groups (P=0.47). FPLC = first primary lung cancer.

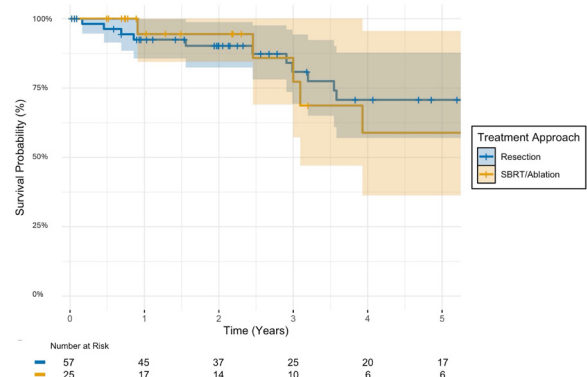

Figure S3 Kaplan-Meier overall survival curve for patients with Stage IA second primary lung cancer (SPLC), stratified by treatment approach: surgical resection (blue) vs. SBRT/ablation (yellow). Shaded areas indicate 95% confidence intervals. There was no significant difference in overall survival between the two treatment groups (P=0.99). SPLC = second primary lung cancer; SBRT = stereotactic body radiation therapy.
