

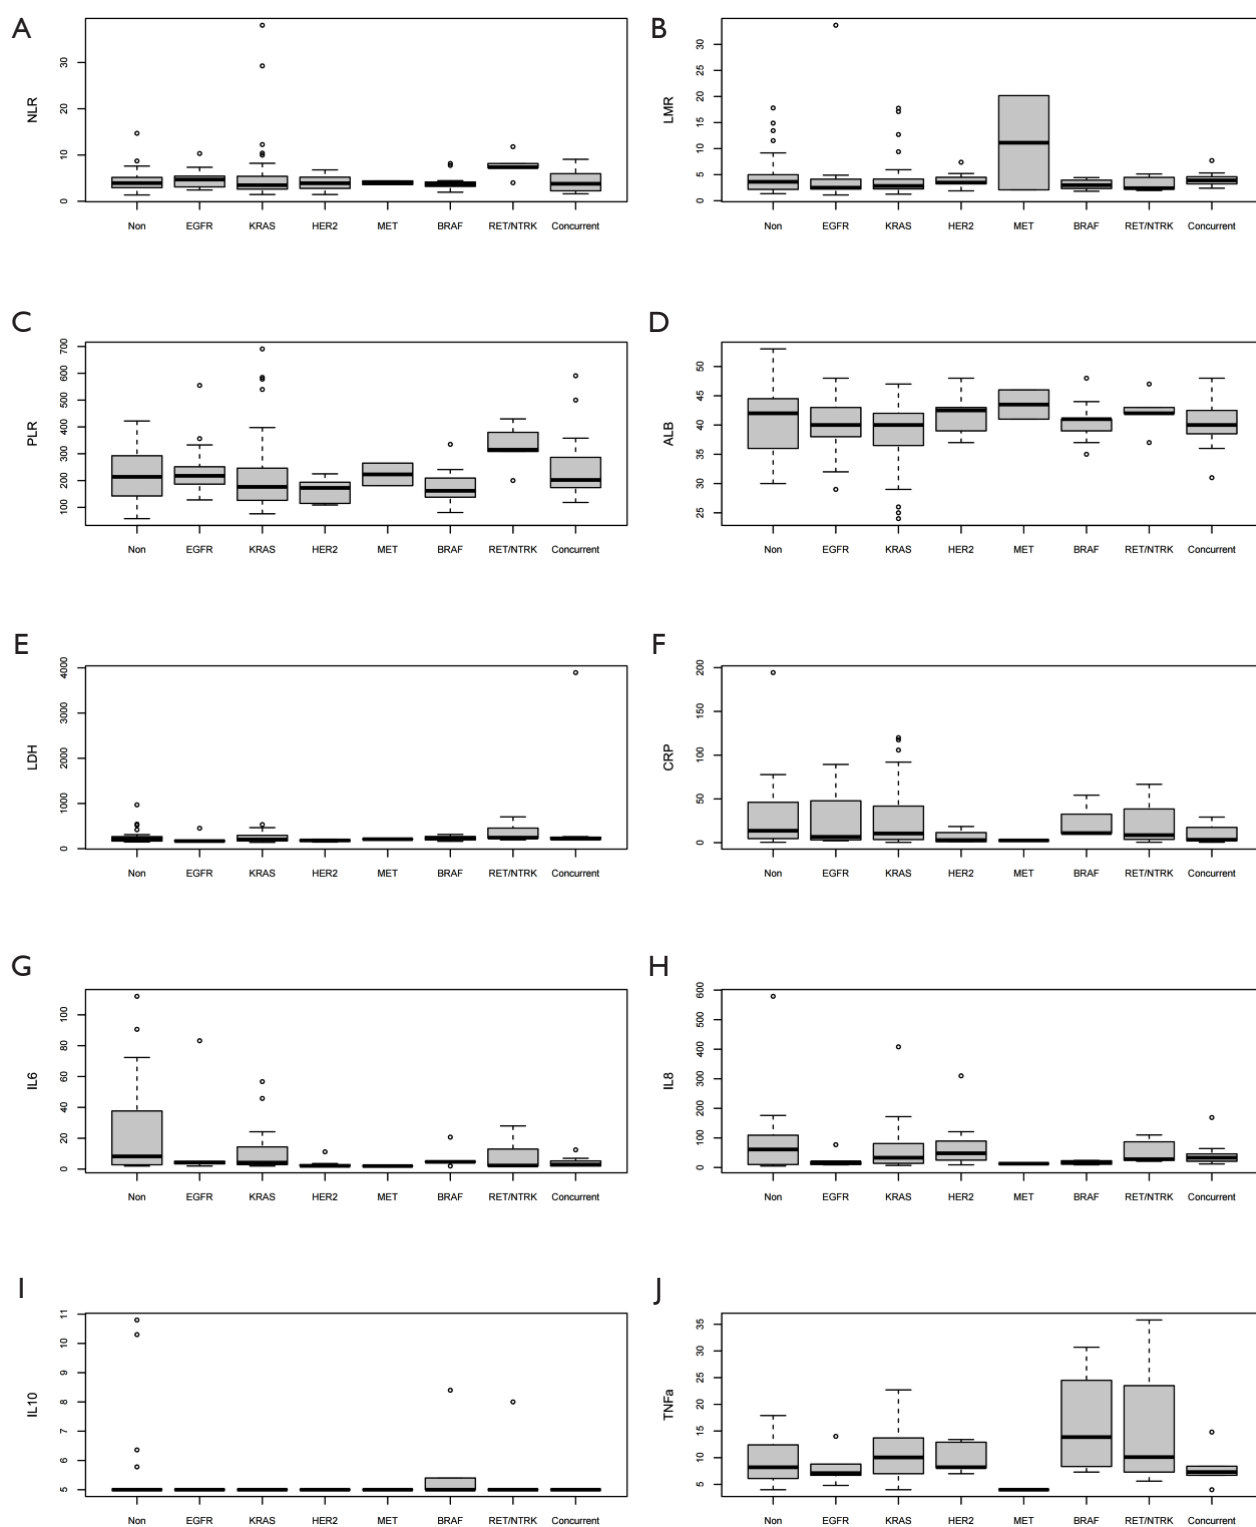

Figure S1 Serological indices and inflammatory factors at baseline (before first-line immunotherapy) between different gene alteration subgroups. (A) Neutrophil-to-lymphocyte ratio (NLR); (B) lymphocyte-to-monocyte ratio (LMR); (C) platelet-to-lymphocyte ratio (PLR); (D) albumin (ALB, g/L); (E) lactate dehydrogenase (LDH, U/L); (F) C-reactive protein (CRP, mg/L); (G) IL-6 (pg/mL); (H) IL-8 (pg/mL); (I) IL-10 (pg/mL); (J) TNF-α (pg/mL). Non, non-driver gene alterations.
