

**Figure S1** Comparison between the postoperative predictive ratios (PoPRs) calculated using the left-right blood flow ratios from dynamic perfusion digital radiography and pulmonary perfusion scintigraphy. (A) Correlation between PoPRs of the affected side obtained from dynamic perfusion digital radiography (DPDR) and pulmonary perfusion scintigraphy (PPS). (B) Bland-Altman analysis between PoPRs of affected-side, obtained from DPDR and PPS. The dashed line indicates the mean; the dotted lines indicate the mean  $\pm 1.96$  standard deviations.
