

Figure S1 Recurrence-free survival (A) and overall survival (B) curves for each stage. HR, hazard ratio; CI, confidence interval.

Figure S2 Forest plot on multivariate analysis for overall survival. HR, hazard ratio; CEA, carcinoembryonic antigen; TKI, tyrosine kinase inhibitor, EGFR, epidermal growth factor receptor.

Table S1 Weights for each analysis

EGFR type	Weight (min)	Weight (max)
All cases	0.497	4.654
Wild type	0.434	5.021
Mutant	0.430	6.288
del19	0.412	3.289
L858R	0.419	1.357
Uncommon	0.500	0.500
