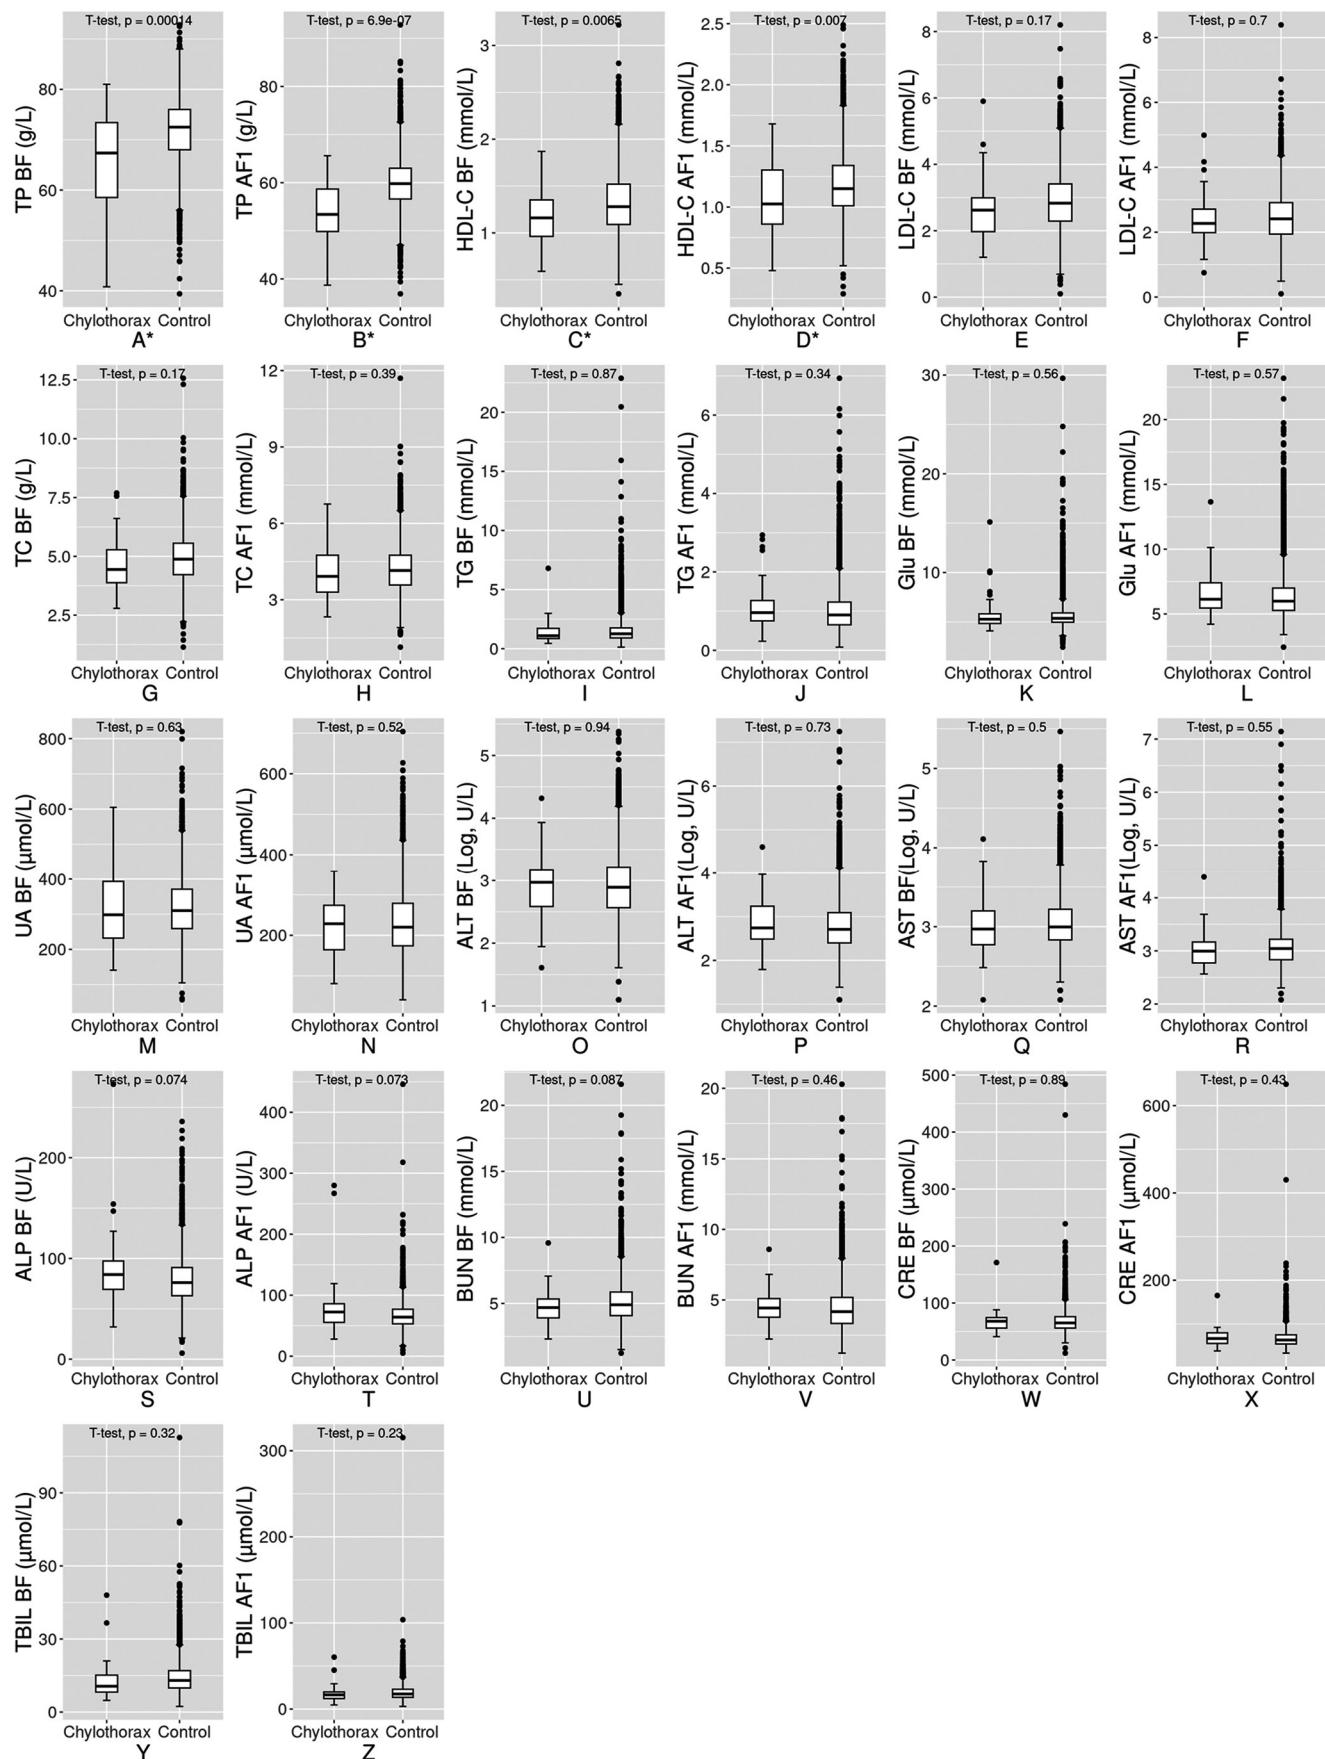

Figure S1 Differences in preoperative and postoperative day 1 laboratory indicators. *, statistical significance was set at $P<0.05$. TP, total protein; HDL-C, high-density lipoprotein cholesterol; LDL-C, low-density lipoprotein cholesterol; TC, total cholesterol; TG, triglycerides; Glu, blood glucose; UA, blood uric acid; ALT, alanine aminotransferase; AST, aspartate aminotransferase; ALP, alkaline phosphatase; BUN, blood urea nitrogen; CRE, creatinine, TBIL, total bilirubin. BF, before operation; AF1, after operation day one.

*, the postoperative pathological results indicate a composite carcinoma with the presence of other concurrent malignant tumors. M, male; F, female; LUL, left upper lung; LLL, left lower lung; RUL, right upper lung; RML, right middle lung; RLL, right lower lung; W, wedge resection; S, lobectomy; L, pneumonectomy; MSS, mediastinal surgery; LUAD, lung adenocarcinoma; LUSC, lung squamous cell carcinoma; mediastinal lymph node group: 2, upper paratracheal nodes; 3, prevascular and retrotracheal nodes; 4, lower paratracheal nodes; 5, subaortic nodes; 6, paraaortic nodes; 7, subcarinal nodes; 8, paraesophageal nodes; 9, pulmonary ligament nodes; PN, parenteral nutrition; SST, somatostatin; TNM, tumor, node, metastasis.

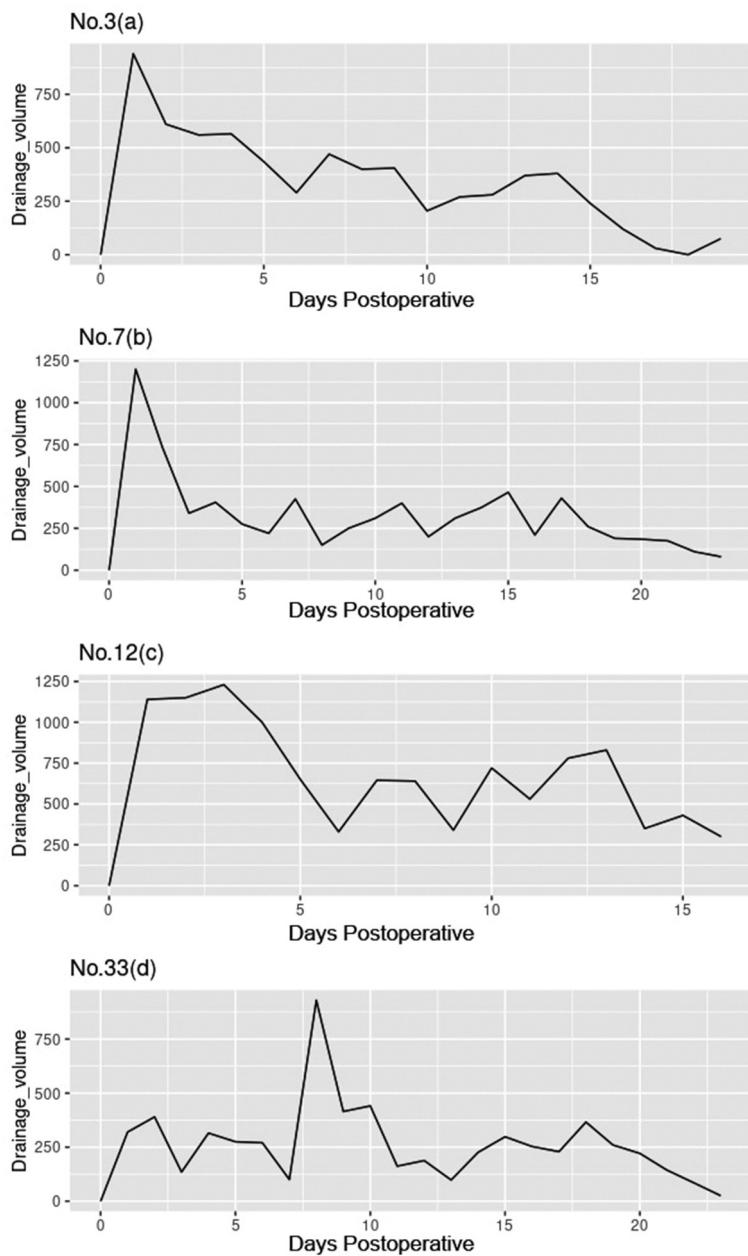

Figure S2 The line graph of postoperative drainage volume for 4 characteristic cases. These include the following typical cases: chemical pleurodesis (Case 3), improvement after conservative treatment (Case 7), VATS thoracic duct ligation (Case 12), and chylothorax with severe postoperative complications (Case 33).
