

**Table S1** The information of 14 cases of sICH

| Cases   | NIHSS at admission | NIHSS at 24-48 hours after EVT | HT subtypes | Intervention measures                             |
|---------|--------------------|--------------------------------|-------------|---------------------------------------------------|
| Case 1  | 28                 | 32                             | PH-2        | External ventricular drain placement              |
| Case 2  | 13                 | 22                             | PH-2        |                                                   |
| Case 3  | 12                 | 17                             | PH-2        |                                                   |
| Case 4  | 12                 | 16                             | PH-2        |                                                   |
| Case 5  | 19                 | 26                             | PH-2        |                                                   |
| Case 6  | 25                 | 33                             | PH-1        | Hemicraniectomy                                   |
| Case 7  | 19                 | 36                             | PH-2        |                                                   |
| Case 8  | 15                 | 35                             | PH-2        | Hematoma and external ventricular drain placement |
| Case 9  | 17                 | 19                             | PH-1        |                                                   |
| Case 10 | 13                 | 21                             | PH-2        |                                                   |
| Case 11 | 14                 | 16                             | PH-2        |                                                   |
| Case 12 | 9                  | 13                             | PH-1        |                                                   |
| Case 13 | 13                 | 18                             | PH-2        |                                                   |
| Case 14 | 8                  | 16                             | PH-2        |                                                   |

sICH, symptomatic intracerebral hemorrhage; NIHSS: the National Institutes of Health Stroke Scale; EVT, endovascular treatment; HT, Hemorrhagic Transformation; PH, parenchymal hemorrhage

**Figure S1** The NCCT image of Case 8 (A) and Case 13 (B) at 24-48 hours after EVT. Case 8 was drained by hematoma puncture (blue arrow) and ventricular drainage (red arrow).
