**Figure S1** Additional visualizations. We illustrate different prediction results not included in the main paper. These visualizations provide further insights into the model's performance, complementing the main analysis and offer a more detailed understanding of its strengths and limitations. The star indicates the positive point prompt used for interactive segmentation. (A) Segmentation results for dermoscopy and endoscopy images. (B) Segmentation results for fundus, OCT, and microscopy images. (C) Segmentation results for histopathology. (D) Segmentation results for X-ray and ultrasound images. All medical images were obtained from the publicly available datasets: dermoscopy - UWATER Skin Cancer (129); endoscopy - ETIS-LaribPolypDB (130) and AutoLaparo (131); OCT - DRAC2022 (132); Microscopy - SegPC2021 (133) and MitoEM (134); Fundus - PAPILA (135) and RAVIR (136); Histopathology - PathologyImagesForGlandSeg (137), GlaS@MICCAI2015 (138), MoNuSAC2020 (139), and WSSS4LUAD (140); X-ray - COVID-19 Radiography (144,145), ARCADE (146), and RBIS-DDSM (147); ultrasound - QAMEBI (146,147) and BUSC (148). Histopathology dataset specifications: PathologyImagesForGlandSeg (20 $\times$  magnification, 0.62  $\mu\text{m}/\text{pixel}$  resolution); GlaS@MICCAI2015 (20 $\times$  magnification, 0.62  $\mu\text{m}/\text{pixel}$  resolution); MoNuSAC2020 (40 $\times$  magnification); WSSS4LUAD (40 $\times$  magnification, 0.2517  $\mu\text{m}/\text{pixel}$  resolution).
