

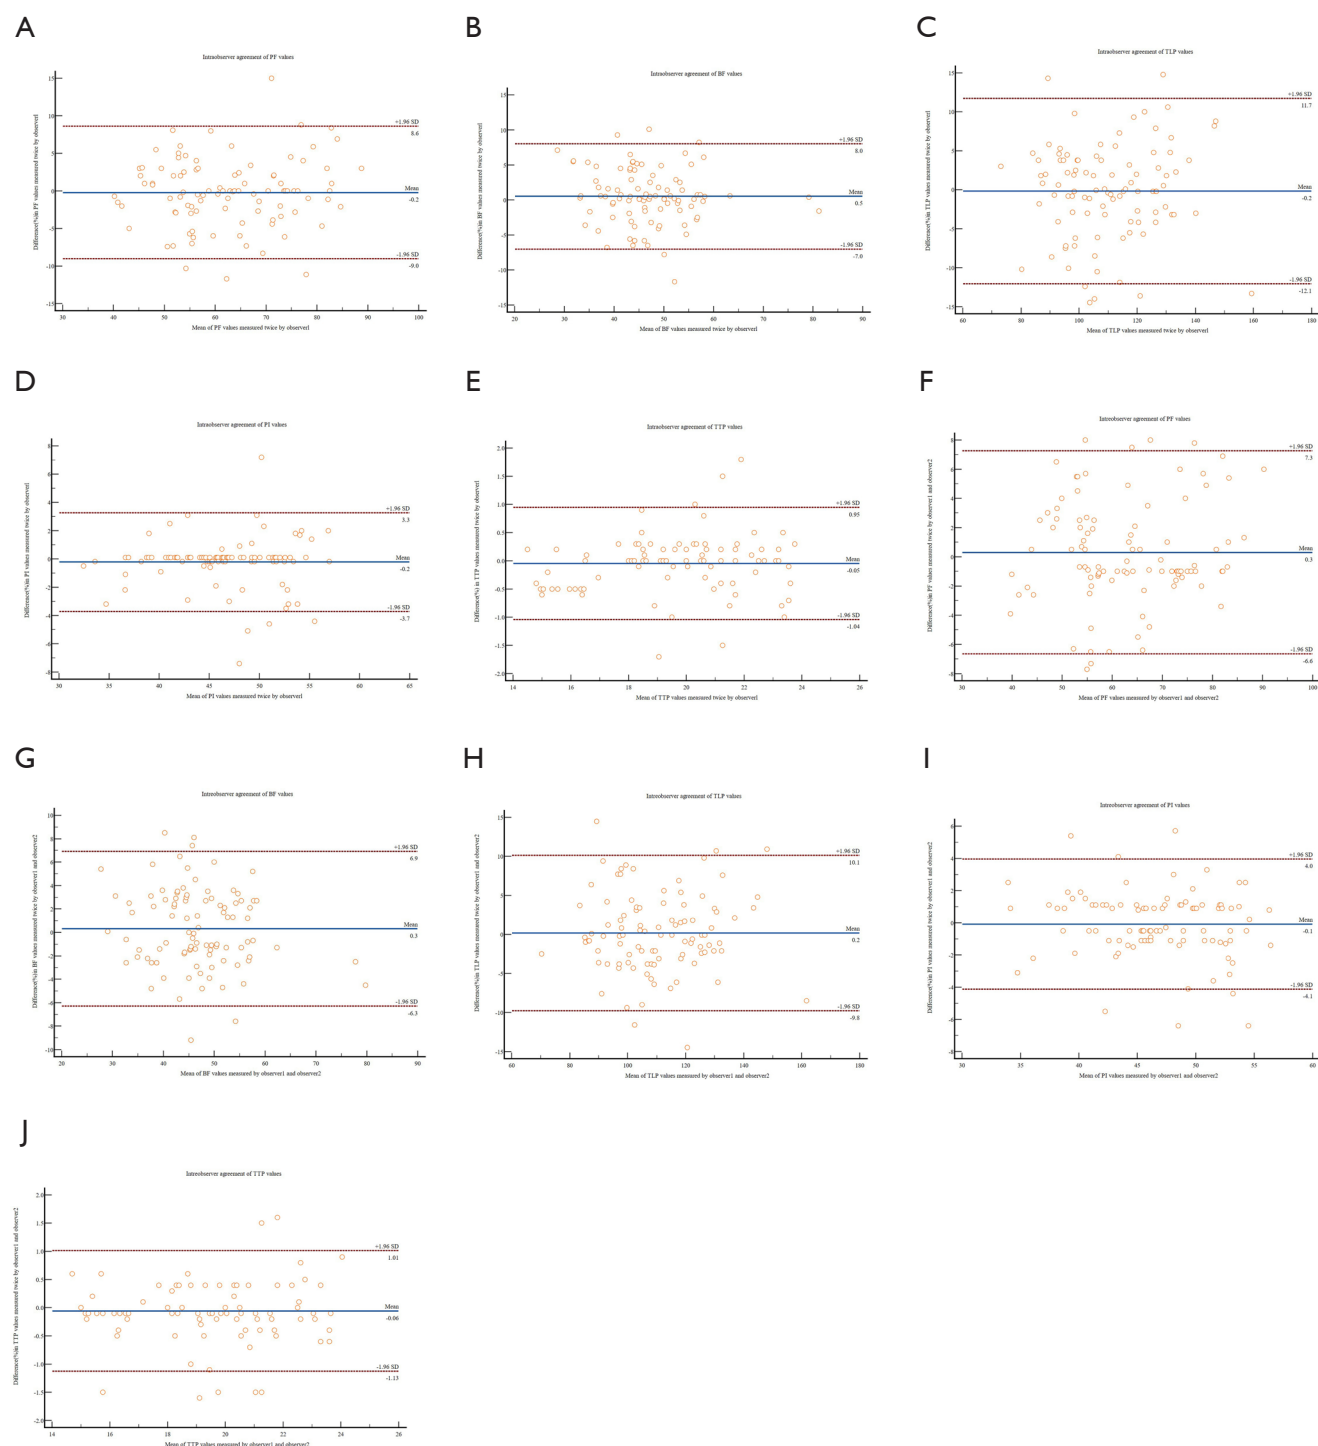

Figure S1 Bland-Altman plots show the intra-observer (A-E) and inter-observer (F-J) reproducibility for the measurements of the PF, BF, PI, TLP, and TTP values, respectively. Solid and dashed lines reflect mean values and 95% limits of agreement, respectively. PF, pulmonary artery flow; BF, bronchial artery flow; PI, perfusion index; TLP, total perfusion; TTP, time-to-peak.

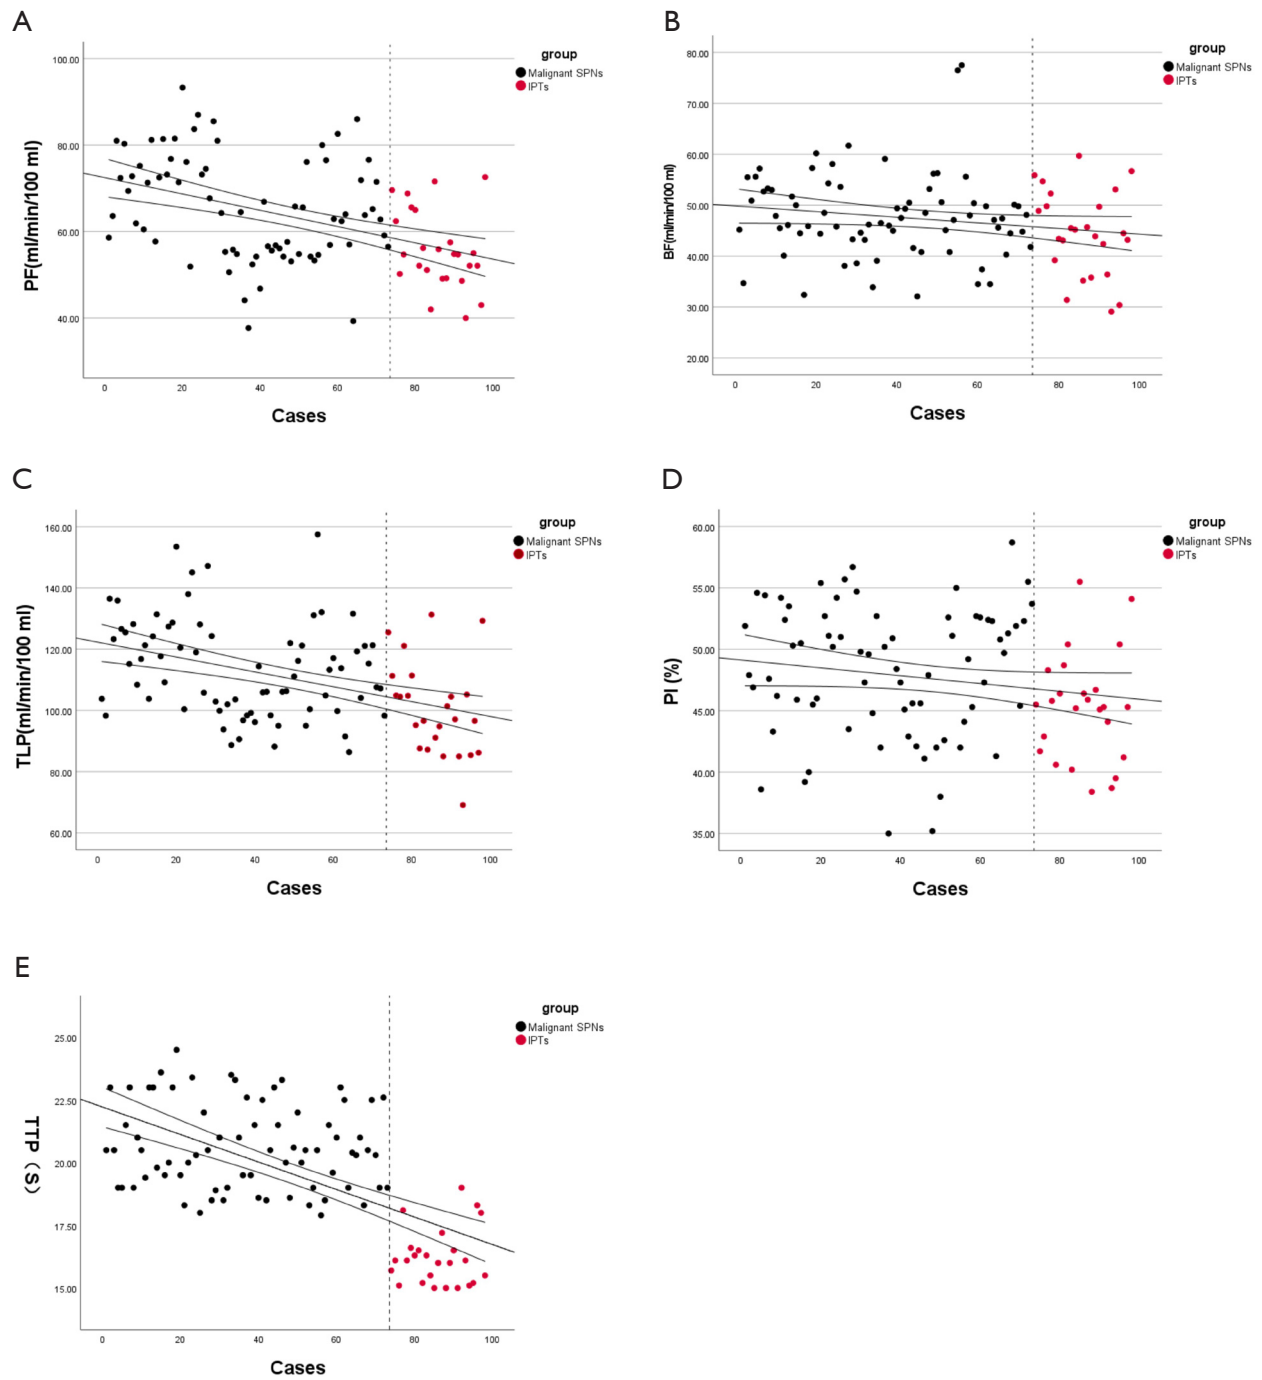

Figure S2 Scatter plot of perfusion index of PF, BF, PI, TLP, and TTP values, respectively. PF, pulmonary artery flow; BF, bronchial artery flow; PI, perfusion index; TLP, total perfusion; TTP, time-to-peak.
