

Appendix 1 Detailed assessment of covariates

Smoking status was divided into three categories: (I) never smokers, defined as those who have smoked fewer than 100 cigarettes in their lifetime; (II) former smokers, defined as those who have smoked more than 100 cigarettes in their lifetime but no longer smoke; (III) current smokers, defined as those who have smoked more than 100 cigarettes in their lifetime and continue to smoke, either occasionally or daily (51).

Alcohol consumption was categorized into five groups: (I) never: individuals who have consumed fewer than 12 alcoholic drinks in their lifetime; (II) former: individuals who consumed more than 12 drinks in a single year but did not drink in the past year, or those who have consumed more than 12 drinks in their lifetime but did not drink in the past year; (III) mild: females who typically consumed 1 drink per day, or males who consumed 2 drinks per day; (IV) moderate: females who consumed 2 drinks per day, or males who consumed 3 drinks per day; (V) heavy: females who averaged more than 3 drinks per day, or males who averaged more than 4 drinks per day over the past year (52).

Physical activity was measured using metabolic equivalents (MET) based on responses from the questionnaire. Participants were then categorized into three groups: low activity (less than 600 MET minutes per week), moderate activity (600 to 2999 MET minutes per week), and high activity (3000 or more MET minutes per week) (53).

Dietary health was measured using the Healthy Eating Index-2015 (HEI-2015), which consists of 13 dietary components (54). Data from the first 24-hour dietary recall were used to calculate the HEI-2015 score. The total score, ranging from 0 to 100, was then categorized into two groups: scores below 60 and scores of 60 or above (51).

Hypertension was determined by any of the following: an average systolic blood pressure of 130 mmHg or higher, a diastolic blood pressure of 80 mmHg or higher, self-reported diagnosis, or the use of antihypertensive medication (55).

Diabetes status was assessed based on the following criteria: a physician's diagnosis, HbA1c levels of 6.5% or higher, fasting glucose levels of 7.0 mmol/L or higher, blood glucose levels of 11.1 mmol/L or higher during a random or two-hour oral glucose tolerance test (OGTT), or the use of diabetes medication or insulin (56).

Hyperlipidemia was identified based on the following criteria: total cholesterol levels of 5.0 mmol/L or higher, LDL-cholesterol levels of 3.0 mmol/L or higher, triglyceride levels of 1.7 mmol/L or higher, or the use of lipid-lowering medications (57).

Chronic kidney disease (CKD) was defined based on an estimated glomerular filtration rate (eGFR) below 60 mL/min/1.73 m². The eGFR was calculated using the Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) equation (58).

Cardiovascular disease (CVD) was defined as a self-reported diagnosis by a healthcare provider, including conditions such as congestive heart failure, coronary heart disease, angina, myocardial infarction, or stroke.

Table S4 Characteristics of the study population according to quartiles of TyG-BMI

Characteristics	Q1	Q2	Q3	Q4
Age (years), mean (SE)	43.08 (0.54)	50.05 (0.38)	49.91 (0.40)	49.13 (0.38)
TyG, mean (SE)	8.05 (0.01)	8.46 (0.01)	8.77 (0.01)	9.06 (0.02)
BMI (Kg/m ²), mean (SE)	22.09 (0.05)	26.49 (0.04)	30.19 (0.06)	38.03 (0.14)
TyG-WC, mean (SE)	659.19 (1.69)	798.06 (1.59)	905.20 (1.74)	1082.08 (3.83)
TyG-WHtR, mean (SE)	3.93 (0.01)	4.72 (0.01)	5.36 (0.01)	6.44 (0.02)
Sex, n (%)				
Female	2180 (58.68)	1774 (46.21)	1828 (44.41)	2168 (53.67)
Male	1718 (41.32)	2123 (53.79)	2069 (55.59)	1730 (46.33)
Race/ethnicity, n (%)				
Mexican American	337 (5.34)	567 (8.03)	720 (11.01)	697 (10.39)
Non-Hispanic White	1651 (67.70)	1583 (67.38)	1510 (65.39)	1607 (66.32)
Non-Hispanic Black	774 (9.74)	762 (9.55)	776 (10.07)	924 (12.07)
Others	1136 (17.22)	985 (15.04)	891 (13.52)	670 (11.22)
PIR, n (%)				
≤ 1.3	1080 (19.02)	1056 (18.39)	1087 (19.19)	1297 (22.76)
1.3-3.5	1601 (36.61)	1629 (35.58)	1702 (39.96)	1674 (41.38)
> 3.5	1217 (44.37)	1212 (46.04)	1108 (40.84)	927 (35.86)
Education level, n (%)				
Less than high school	753 (12.84)	948 (15.12)	1036 (17.24)	1042 (17.88)
High school	843 (20.35)	854 (22.92)	917 (23.90)	918 (24.77)
Above high school	2302 (66.81)	2095 (61.96)	1944 (58.86)	1938 (57.35)
Smoking status, n (%)				
Never	2289 (58.07)	2156 (54.98)	2135 (53.54)	2086 (54.14)
Former	702 (20.02)	956 (25.58)	1036 (28.53)	1093 (29.30)
Now	907 (21.91)	785 (19.45)	726 (17.93)	719 (16.57)
Alcohol consumption n (%)				
Never	533 (10.22)	497 (9.10)	532 (10.23)	536 (10.50)
Former	367 (7.41)	486 (10.11)	564 (11.27)	614 (13.96)
Mild	1600 (42.38)	1572 (43.66)	1416 (39.46)	1340 (38.23)
Moderate	625 (18.84)	578 (17.07)	553 (16.79)	524 (15.16)
Heavy	773 (21.15)	764 (20.06)	832 (22.26)	884 (22.14)
Physical activity, n (%)				
Low	504 (11.80)	525 (12.89)	504 (12.56)	576 (15.33)
Moderate	1460 (37.99)	1493 (40.43)	1468 (39.47)	1413 (37.43)
High	1934 (50.20)	1879 (46.67)	1925 (47.97)	1909 (47.24)
Hypertension, n (%)				
No	2982 (81.48)	2437 (66.80)	2095 (58.93)	1648 (45.88)
Yes	916 (18.52)	1460 (33.20)	1802 (41.07)	2250 (54.12)
Diabetes, n (%)

TyG, triglyceride glucose; WC, waist circumference; WHtR, waist to height ratio; BMI, body mass index; N, number; OR, odds ratio; CI, confidence interval. Model 1: Adjusted for age, sex and race/ethnicity. Model 2: adjusted for family income-poverty ratio, educational level, smoking status, alcohol consumption, physical status, dietary health based on the model 1. Model 3: adjusted the chronic disease condition (hypertension, diabetes, hyperlipidemia, chronic kidney disease, and cardiovascular disease) based on the model 2.
