

Figure S1 The Correlations between the mRNA expression levels of prognostic-related UHRF1, KIF4A, and NEK2 gene in PM patients. (A) The Correlations between the mRNA expression levels of NEK2 and KIF4A. (B) The Correlations between the mRNA expression levels of UHRF1 and KIF4A. (C) The Correlations between the mRNA expression levels of NEK2 and UHRF1. UHRF1: ubiquitin like with PHD and ring finger domain 1; KIF4A: kinesin family member 4A; NEK2: never in mitosis gene A-related kinase 2.
