

Supplementary

Table S1 Chi-square analysis on the degree of lymph node metastasis involvement after propensity score matching

Variables	After matching		P
	Surgery only (n=74)	Surgery with radiotherapy (n=74)	
Lymph node group			0.417
NA	0 (0.0%)	2 (2.7%)	
0	13 (17.6%)	13 (17.6%)	
1-10	32 (43.2%)	30 (40.5%)	
≥10	29 (39.2%)	29 (39.2%)	

Table S2 Cox proportional hazard regression analysis for the degree of lymph node metastasis involvement associated with CSS

Variables	Univariate analysis	
	HR (95% CI)	P
Lymph node group		
NA	Reference	
0	0.161 (0.015-1.793)	0.138
1-10	0.170 (0.020-1.463)	0.107
≥10	0.305 (0.038-2.452)	0.264

CSS, cancer-specific survival; HR, hazard ratio.
