

Figure S1 Overall survival analysis in different cancer patients. (A,B) Overall survival was analyzed in kidney renal clear cell carcinoma patients and lung adenocarcinoma patients respectively. According to the expression level of *FOSB*, the patients were divided into two cohorts on average: high-expression group and low-expression group. The cutoff value was as follows: P value <0.01 and $|\log\text{FC}| >1$. Affymetrix ID is 202768_at.
