

Figure S1 Drug sensitivity analyses. (A) Drug sensitivity analysis of eight common chemotherapeutic agents in different subgroups of patients with CC; (B) IC50 values for all eight chemotherapy drugs negatively correlated with risk scores. IC50, maximal inhibitory concentration; CC, colon cancer.

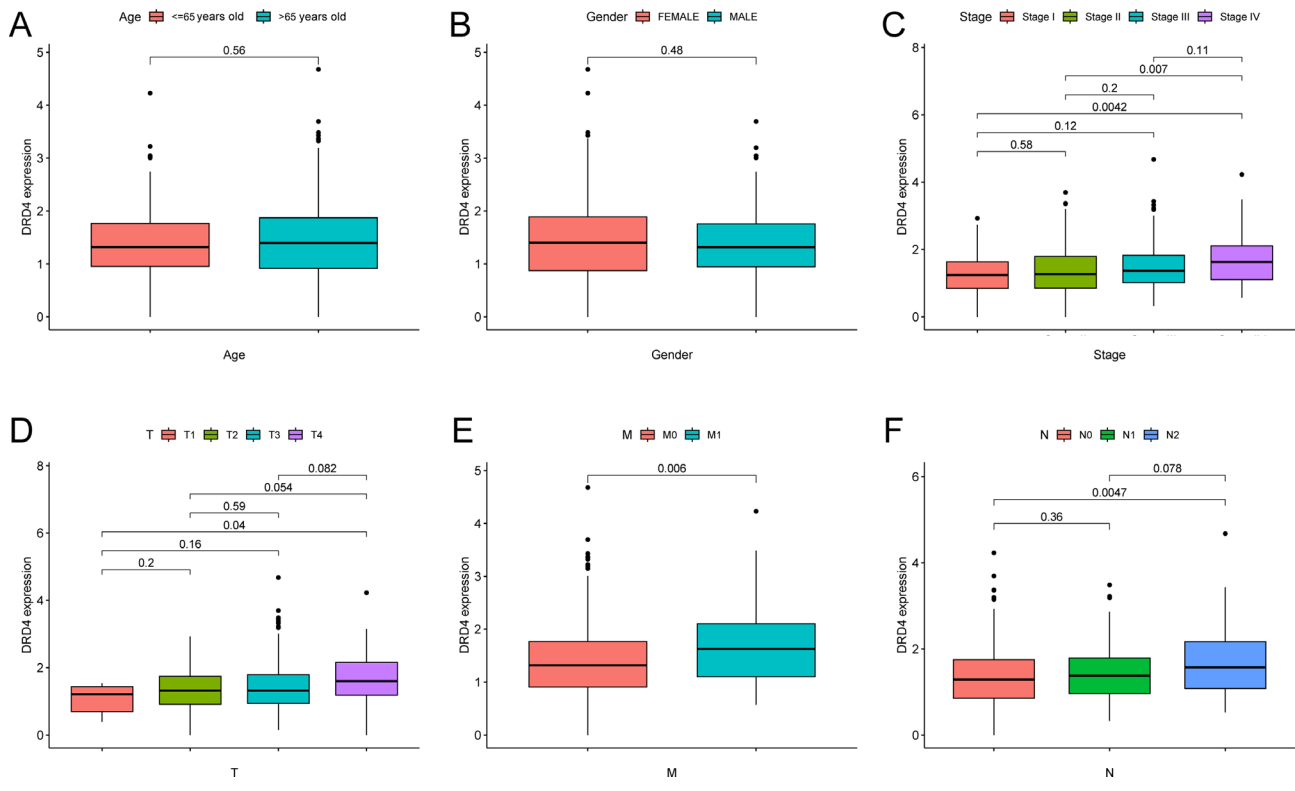

Figure S2 Association between *DRD4* gene expression and clinical features. (A-F) The relationship between *DRD4* gene expression and age, gender, and pathological stages.

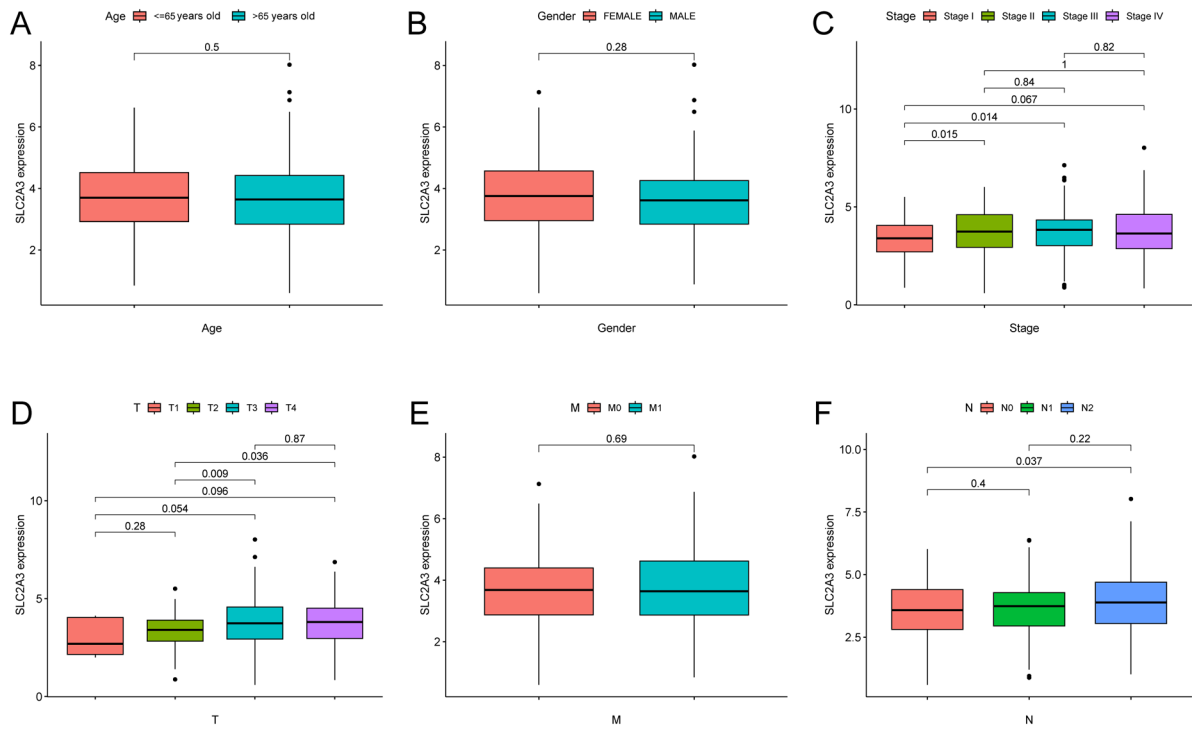

Figure S3 Association between *SLC2A3* gene expression and clinical features. (A-F) The relationship between *SLC2A3* gene expression and age, gender, and pathological stages.
