

Figure S1 Kaplan–Meier analysis of OS and DFS according to PD-L1 expression score (TPS <1, TPS 1–49%, TPS ≥50%) (A,B) and B3GNT3 expression (-, +, ++, +++) (C,D) in surgically resected lung adenocarcinoma patients. The P value for the difference between the two curves was determined by the log-rank test. PD-L1, programmed cell death-ligand 1; B3GNT3, beta-1,3-N-acetylglucosaminyltransferase 3; OS, overall survival; DFS, disease-free survival.
