

Figure S1 The nomogram’s performance in patients with ES-SCLC. Calibration of 2-year OS predicted by the nomogram and that actually observed. On the calibration curve, the x-axis is the probability of OS predicted using the nomogram, and the y-axis is the observed OS. The reference line for an ideal nomogram is represented by the dotted line. The nomogram’s performance is indicated by the solid line. The vertical lines represent 95% CIs. ES-SCLC, extensive-stage small cell lung cancer; OS, overall survival; CI, confidence interval.
