The superscript “a” indicates one way ANOVA test, the superscript “b” indicates Kruskal-Wallis test. LMR, lymphocyte and monocyte ratio; NLR, neutrophil-to-lymphocyte ratio; PLR, platelet-to-lymphocyte ratio; SII, systemic immune-inflammation index; TIL, tumor-infiltrating lymphocyte; TIM, tumor infiltrating macrophage.

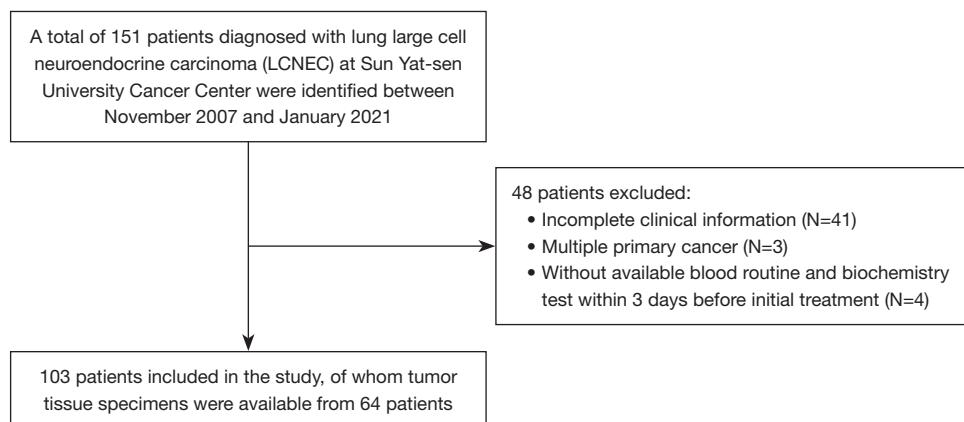

Figure S1 Study flow diagram.

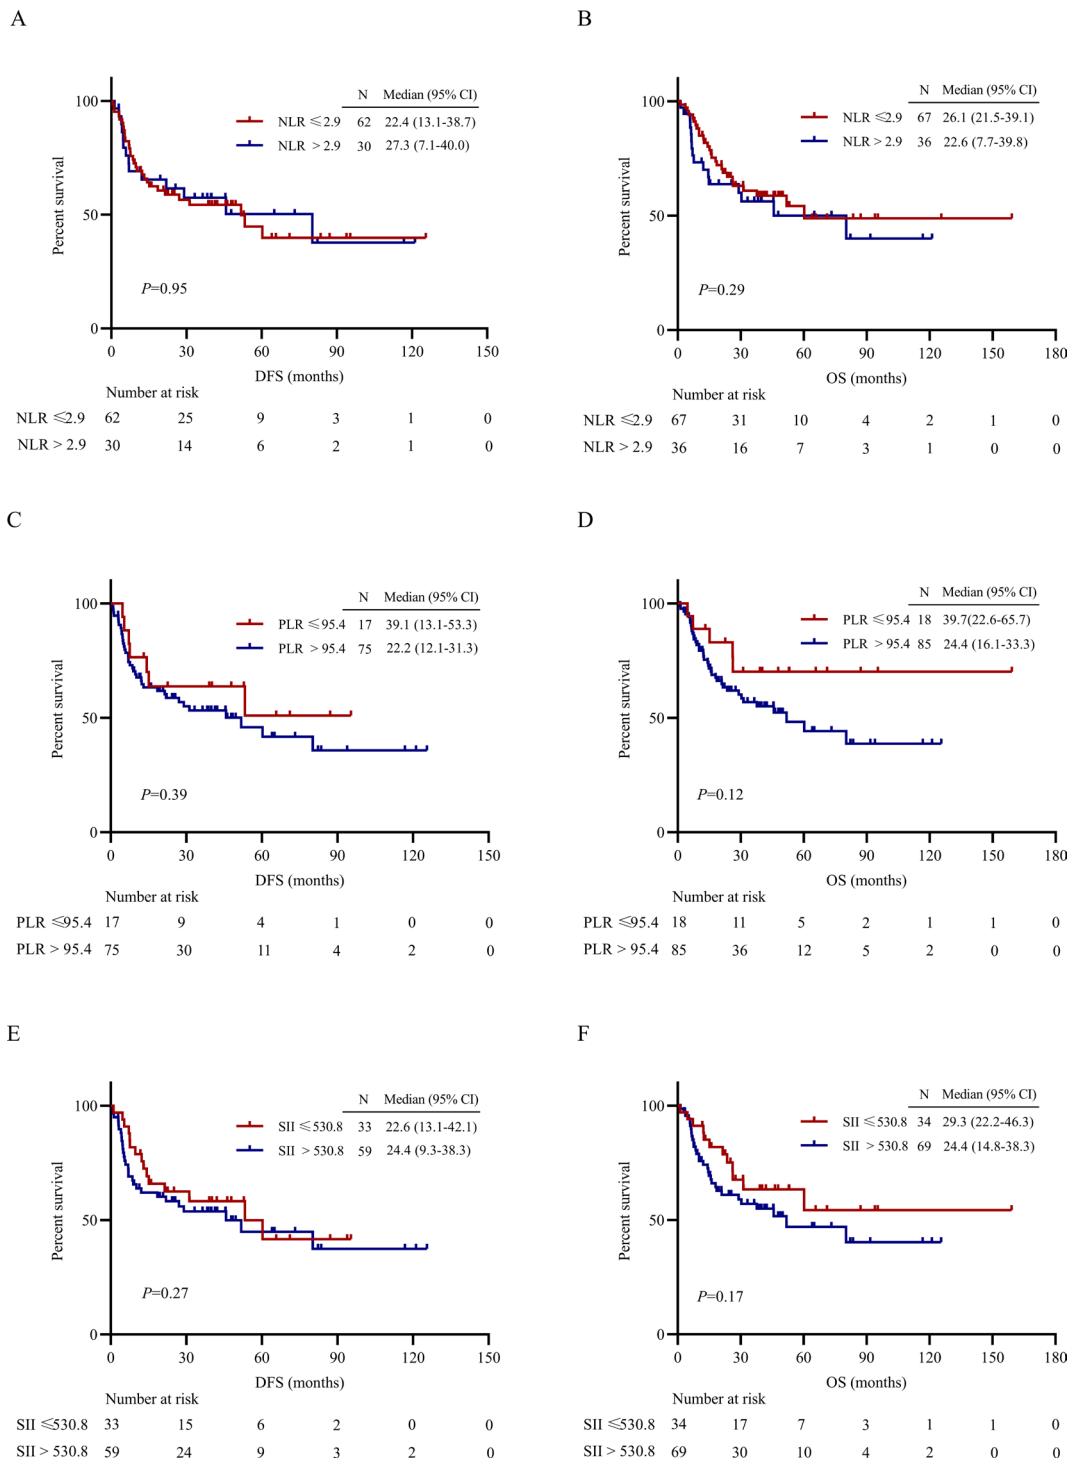

Figure S2 Kaplan-Meier survival curves of DFS and OS. DFS (A) and OS (B) in patients with low NLR (≤ 2.9) versus patients with high NLR (> 2.9). DFS (C) and OS (D) in patients with low PLR (≤ 95.4) versus patients with high PLR (> 95.4). DFS (E) and OS (F) in patients with low SII (≤ 530.8) versus patients with high SII (> 530.8). Statistical significance was calculated by Kaplan-Meier method with log-rank test. A two-sides of $P < 0.05$ was considered significant. The number and median survival time (with 95% confidence interval) of patients in each group are indicated. DFS, disease-free survival; OS, overall survival; NLR, neutrophil-to-lymphocyte ratio; PLR, platelet-to-lymphocyte ratio; SII, systemic inflammation index.
