

Supplementary

Table S1 Lung cancer-related diseases definition and extraction in the UKB

Respiratory diseases	ICD-10 (data fields: 41270)
Asthma	J45
COPD	J44
Emphysema	J43
Fibrosis	J84.1
Pneumonia	J18
Bronchiectasis	J47
Acute bronchitis	J20, J21, J22
Chronic bronchitis	J40, J41, J42, Data-Field 22129
Tuberculosis	A15

UKB, UK Biobank; ICD-10, International Classification of Diseases version 10; COPD, chronic obstructive pulmonary disease.

Table S2 Study population included in the study

Ethnic background	Total number of UKB participants	Number of WES participants included
White British	442,510	401,277
White Irish	13,201	11,916
Any other white background	16,327	14,741
Total	472,038	427,934

UKB, UK Biobank; WES, whole-exome sequencing.

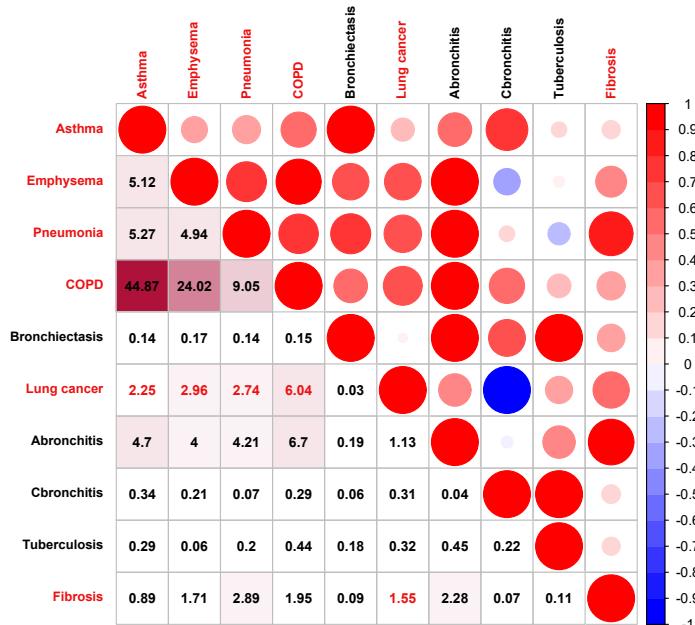

Figure S1 Estimated genetic correlation of ten common respiratory diseases with the LDSC method. The significance of genetic correlation ($-\log_{10}P$) is shown on the bottom triangle and the top triangle indicates the magnitude of the genetic correlation. Diseases related to lung cancer are marked in red. COPD, chronic obstructive pulmonary disease; LDSC, linkage disequilibrium score regression.

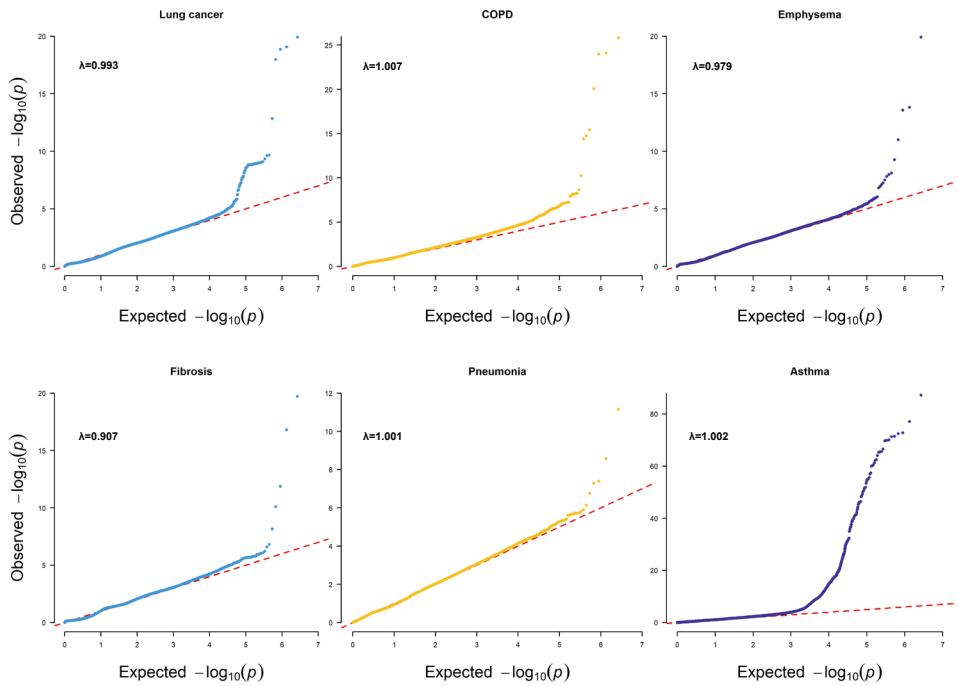

Figure S2 Quantile-quantile plots of association P values for the six lung cancer-related diseases, genomic inflation factor λ are indicated in the figures. COPD, chronic obstructive pulmonary disease.

Table S3 Association results for independent single variants with $P < 5 \times 10^{-8}$ in the whole UKB-450k population

Max_MAF, maximum MAF cutoff; MAF, minor allele frequency; BETA, effect size of allele; SE, standard error of BETA; number_rare, number of markers that are not ultra-rare with MAC >10; number_ultra_rare: number of markers that are ultra-rare with MAC ≤10; MAC, minor allele count; LOF, loss-of-function; COPD, chronic obstructive pulmonary disease.

Table S5 AUC of PGSs used for mediation analyses

PGS based on shared variants	AUC	95% CI	P
PGS_AS	0.536	0.533–0.539	4.70E-207
PGS_COPD	0.543	0.539–0.547	1.46E-278
PGS_EM	0.562	0.553–0.571	2.76E-318
PGS_FI	0.544	0.533–0.556	2.89E-130
PGS_PN	0.524	0.520–0.528	2.83E-149

AUC, area under the receiver operator characteristic curve; PGS, polygenic score; CI, confidence interval; AS, asthma; COPD, chronic obstructive pulmonary disease; EM, emphysema; FI, fibrosis; PN, pneumonia.

A

B

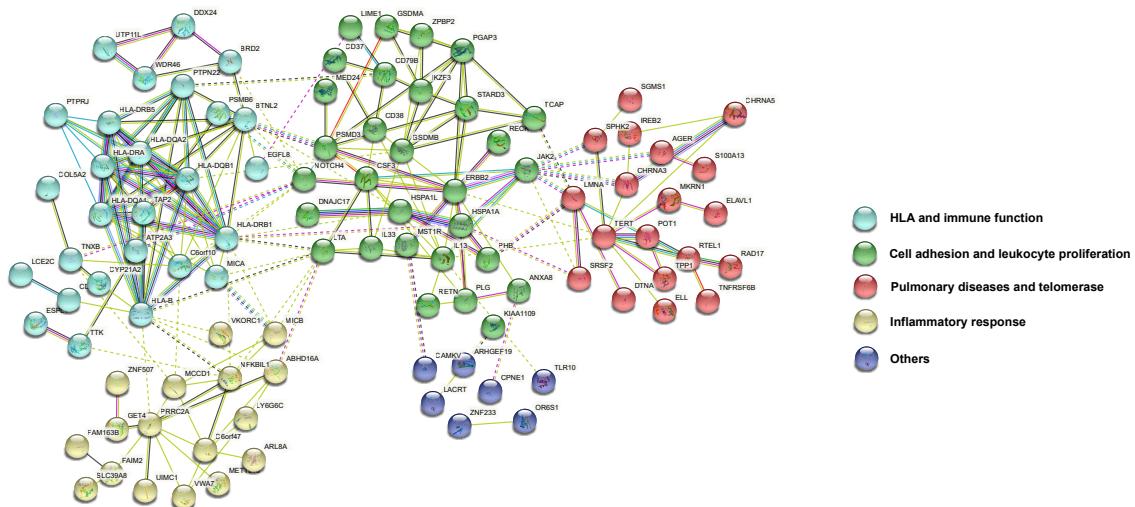

Figure S3 Genetic functional analysis. (A) Left of figure shows the clustering process of the significant enrichment pathway, and those with the same color are grouped into the same class. The most statistically significant term within a cluster is chosen to exhibit in nearby bar plot. (B) Protein-protein interaction network of the signal genes and pleiotropic genes. HLA, human leukocyte antigen.
